What's new since the October 31 edition

- New document statuses: Draft, For Processing, Returned, On Hold, For Signature, Complete and Cancelled. Offices can **Put on hold** a document (section 9).
- **Ask for signatures** on documents that follow no route, such as certificates, then **Mark processed** (section 8).
- A **Signatories** step for document types that have no standard signatories (section 5).
- Anyone on a document's route can add supplemental documents. Forwarded and referred documents now appear in your Documents list (sections 6 and 12).
- Pages update by themselves when a document is signed, routed or returned (section 3).
- **Pre-audit check (AI)** for Disbursement Vouchers, for the Accounting Office (section 10).
- **Work management**: My Work, Boards, Projects and Reports, with deadline reminders (sections 17 and 18).
- People with **more than one office** switch between them at the top of the screen (sections 3 and 20).
- Office heads see, manage, color, archive and delete their office's boards. Administrators manage **Board Templates** (sections 17 and 20).
- Ask DMS has been removed.

1. About the Document Management System

The Document Management System (DMS) is where the offices of the Municipal Government of Candoni prepare, sign, route and keep their documents, and organize the work around them. It runs in any web browser at **https://dms.mgocandoni.com**, on computers, tablets and phones.

With DMS you can:

- Prepare the official forms (DV, OBR, FURS, Payroll, PCV, Liquidation Report, Itinerary of Travel, Travel Order, PR, PO, JO) step by step, with the Accounting Office's checklist of requirements.
- Upload documents that already exist as files (scans, letters, certificates, PDFs from other systems).
- Sign PDFs with your DICT PNPKI digital signature, or with an e-signature mark if you have no PNPKI certificate.
- Route documents from office to office and see where each one is at any moment. Documents outside any route can be sent to the people who must sign them.
- Have the Accounting Office pre-check Disbursement Vouchers with AI.
- Track tasks, deadlines and projects on Boards, My Work, Projects and Reports.
- Keep every processed document in the Archive, backed up automatically to Google Drive.
- Communicate through notifications, circulars, messages and communities.

Every PDF carries a QR code. Anyone who scans it can check that the document is genuine, without signing in.

Who uses DMS

Role	What they do
User (office staff)	Prepares and uploads documents, acts on documents that reach their office, signs where their step signs or where they are asked to sign. Sees the boards of their office.
Office head	Everything a user does, plus: sees every document of the office, sends circulars, gives and restricts access, and manages, colors, archives and deletes the office's boards and projects.
Records Officer	Sees every document (read only), manages the Archive and backups, and gives access for any office.
Administrator	Approves users and sets up document types, routes, checklists, board templates and settings. Sees all documents, boards and projects.
Superadmin	Everything an administrator does, plus making administrators.
Third Party	A supplier, payee or other person outside the LGU. Signs only the documents sent to them, and uses Messages.

How to read this guide

Sections 2 to 4 cover what everyone needs on the first day. Sections 5 to 11 follow a document from preparation to processing. Sections 12 to 19 cover the other parts of DMS, including work management. Section 20 is for administrators. Words in **bold** are buttons, menus or labels exactly as they appear on screen.

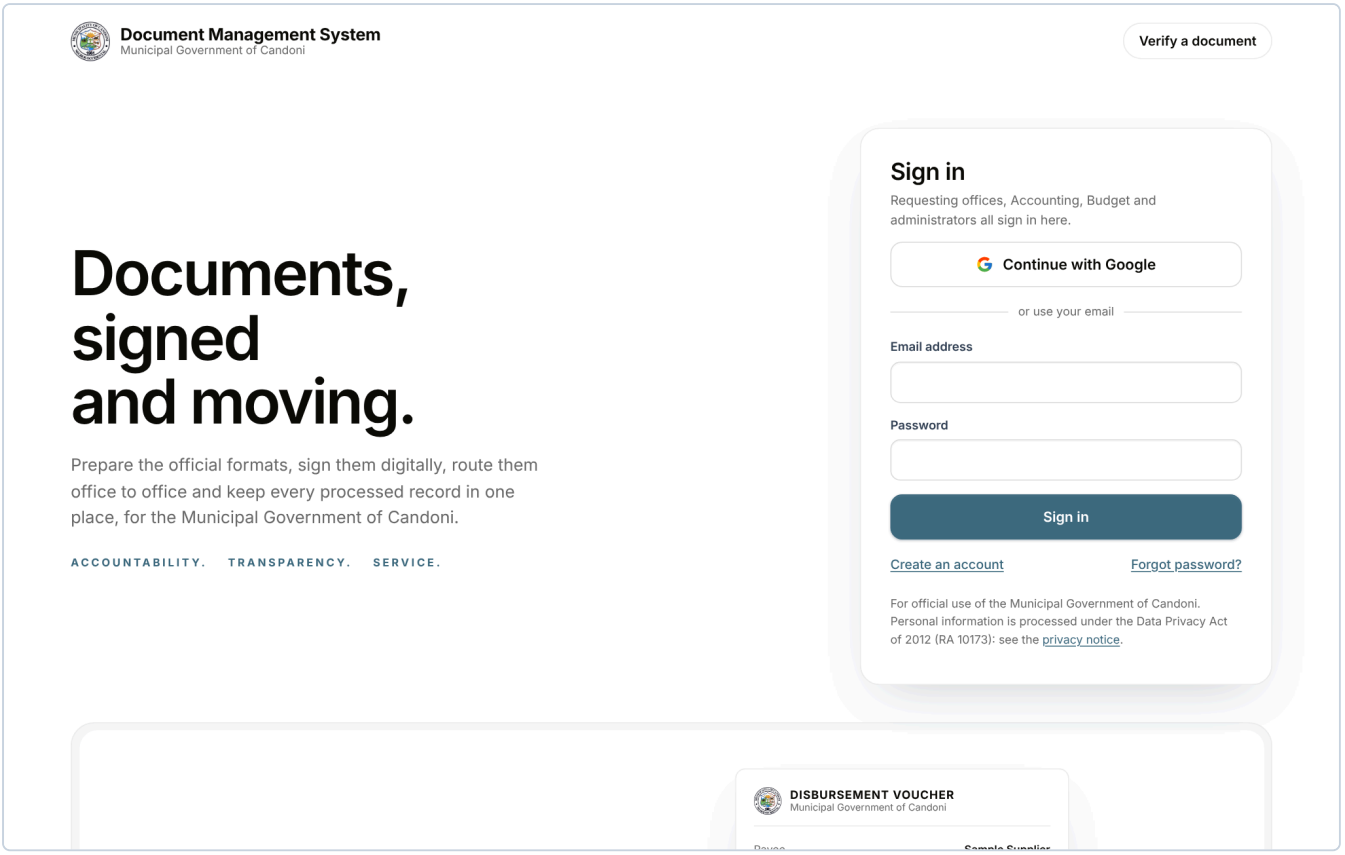

2. Getting started

You need an approved DMS account. Create one yourself, then wait for an administrator to approve it and assign you to your office.

Create an account

1. Open https://dms.mgocandoni.com.
2. Click **Create an account**.
3. Type your full name, your office or department, your email address and a password of at least 6 characters.
4. Click **Create account**.

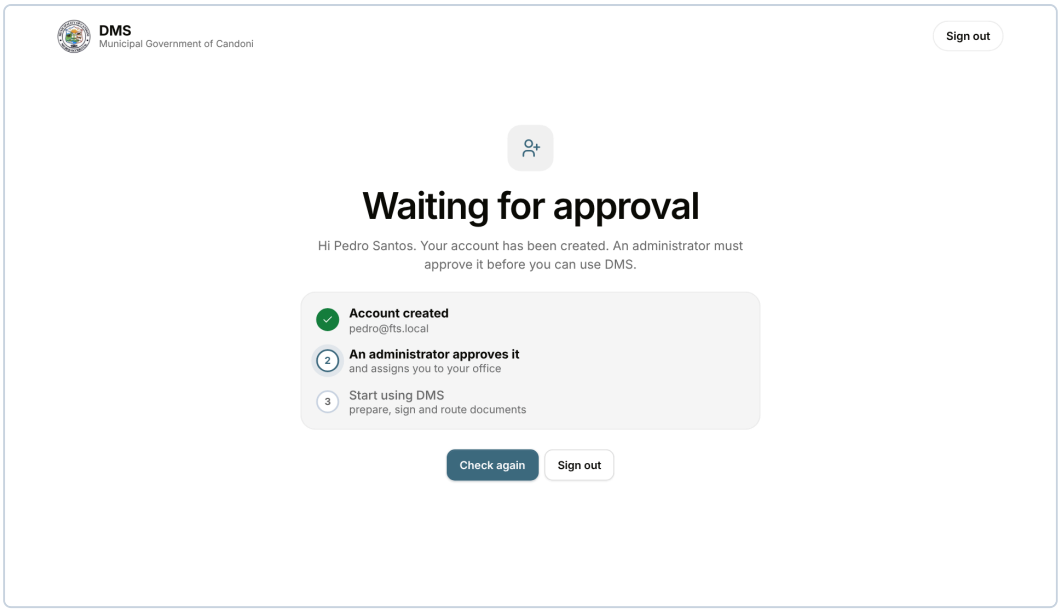

Or click **Continue with Google** to sign up with a Google account, with no password to remember. The office you type is only a request; the administrator confirms it.

The sign-in page

Waiting for approval

After creating your account you see **Waiting for approval**, with three steps: Account created, An administrator approves it, and Start using DMS. Ask your administrator to approve you, then click **Check again**.

Waiting for approval

Sign in

1. Open the site.
2. Click **Continue with Google**, or type your email address and password and click **Sign in**.

DMS signs you out after 60 minutes without activity, so a DMS left open on a shared computer does not stay open.

Forgot your password

1. On the sign-in page, click **Forgot password?**
2. Type your email address and click **Send reset link**.
3. Open the link in the email (check Spam too) and set a new password.

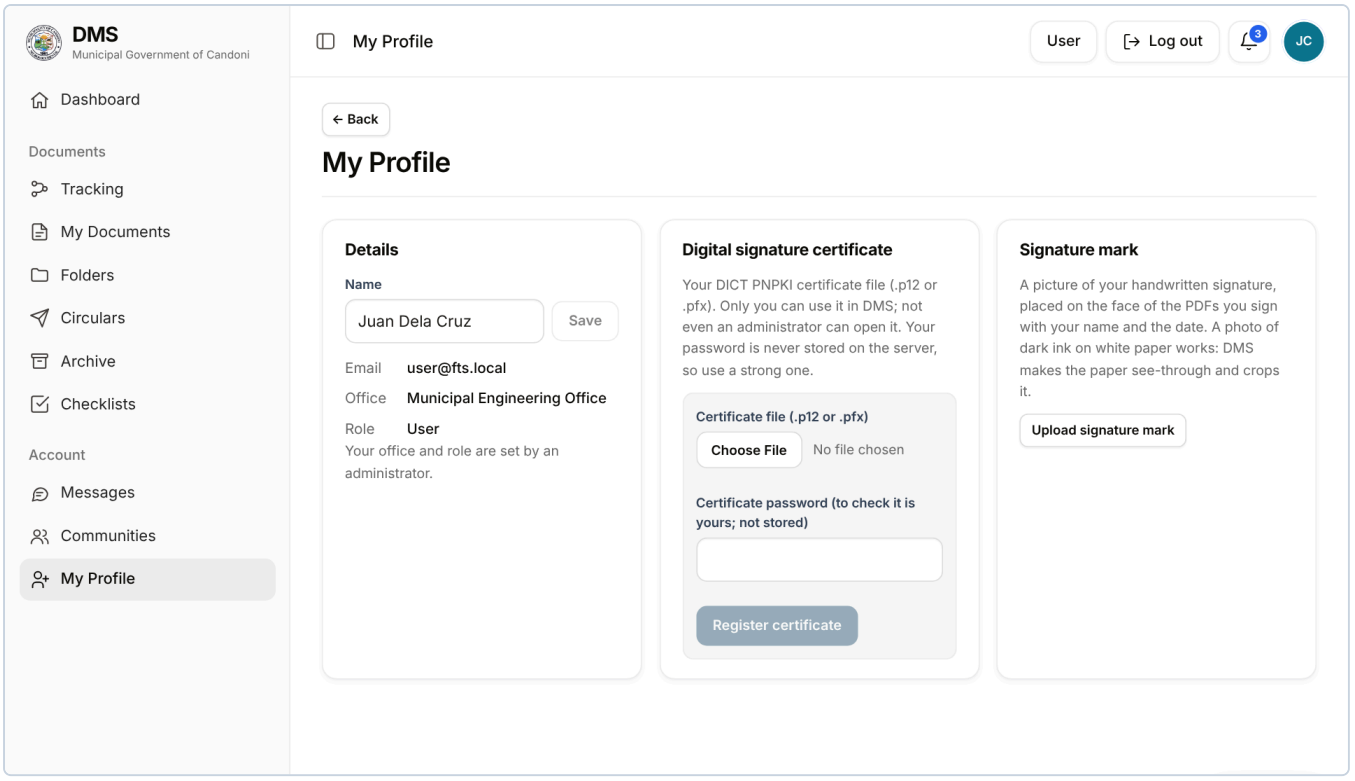

If you signed up with Google, sign in with **Continue with Google**: there is no DMS password to reset.

Your profile

My Profile (in the menu, or click your initials at the top right) holds your name and position and, for signatories:

- your PNPKI certificate (a .p12 or .pfx file from DICT), checked with its password, which is not stored;
- your signature mark: a picture of your handwritten signature (dark ink on white paper, or a PNG with a transparent background);
- **When I sign**: ask for your certificate password every time (recommended), or remember it on this device for a period you choose.

Only you can use your certificate and signature mark. Not even an administrator can.

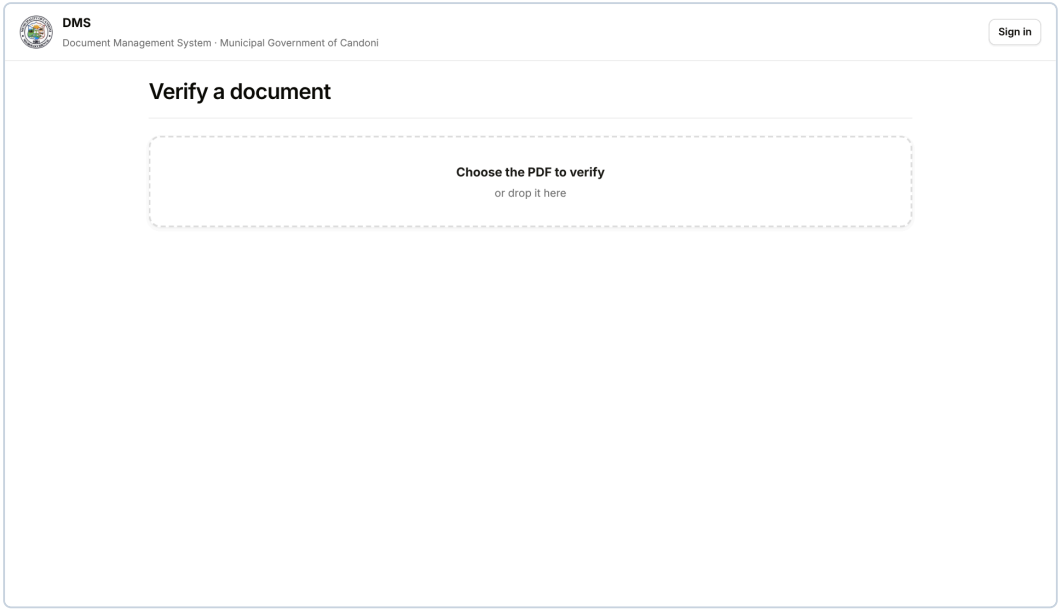

My Profile

Verify a document without an account

Anyone can check a DMS document, signed in or not:

- Scan the QR code on any page of a DMS PDF. It opens the document's public page.
- Or click **Verify a document** on the sign-in page and choose a PDF file. DMS checks its signatures in your browser; the file is not sent anywhere.

Verify a document

3. Finding your way

Every page has the same frame: the menu on the left and the header at the top.

The menu

Group	Item	What it is
	Dashboard	Your summary, things to do and notes
Documents	Tracking	Where every routed document is now
Documents	All / Office / My Documents	The documents you may see, with search and status filters
Documents	Folders	The same documents, in a folder per document type
Documents	Circulars	Letters, memos and orders sent to offices
Documents	Archive	Processed documents, filing and backups
Documents	Checklists	The Accounting Office's checklists of requirements
Work NEW	My Work	The work items assigned to you, on every board
Work	Boards	Task boards of offices, transactions and projects
Work	Projects	Municipal projects: progress, milestones, issues
Work	Reports	Aging, workload and project reports
Account	Messages	Private conversations between users
Account	Communities	Group chats with shared files
Account	My Profile	Your name, certificate and signature mark
Administration	Document Types, Workflow, Users, Board Templates, Settings	For administrators only (section 20)

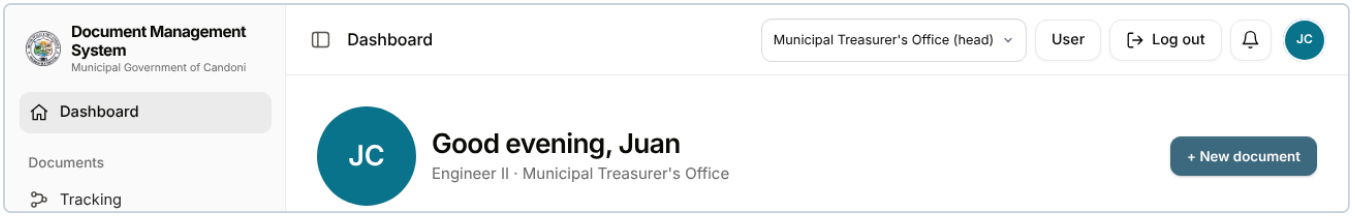

The Documents item is named **My Documents** for staff, **Office Documents** for office heads, and **All Documents** for administrators and the Records Officer. On a phone, open the menu with the button at the top left. The same button folds the menu on a computer.

The header

- **Your office** NEW: if you belong to more than one office, choose the office you are acting for. See below.
- Your role (User, Superadmin...): opens My Profile.
- **Log out**.
- The bell: your Notifications. A blue number on it counts what is new or waiting for you.
- Your initials: open My Profile.

Working for more than one office NEW

Some people work for more than one office, for example staff who are also OIC of another office. An administrator adds the other offices to their account (section 20). They act for one office at a time: choose the office at the top of the screen. DMS then shows that office's documents, boards and notifications, and the office head rights for that office if they head it. You can switch only among the offices the administrator gave you.

Switching offices at the top of the screen

Pages update by themselves NEW

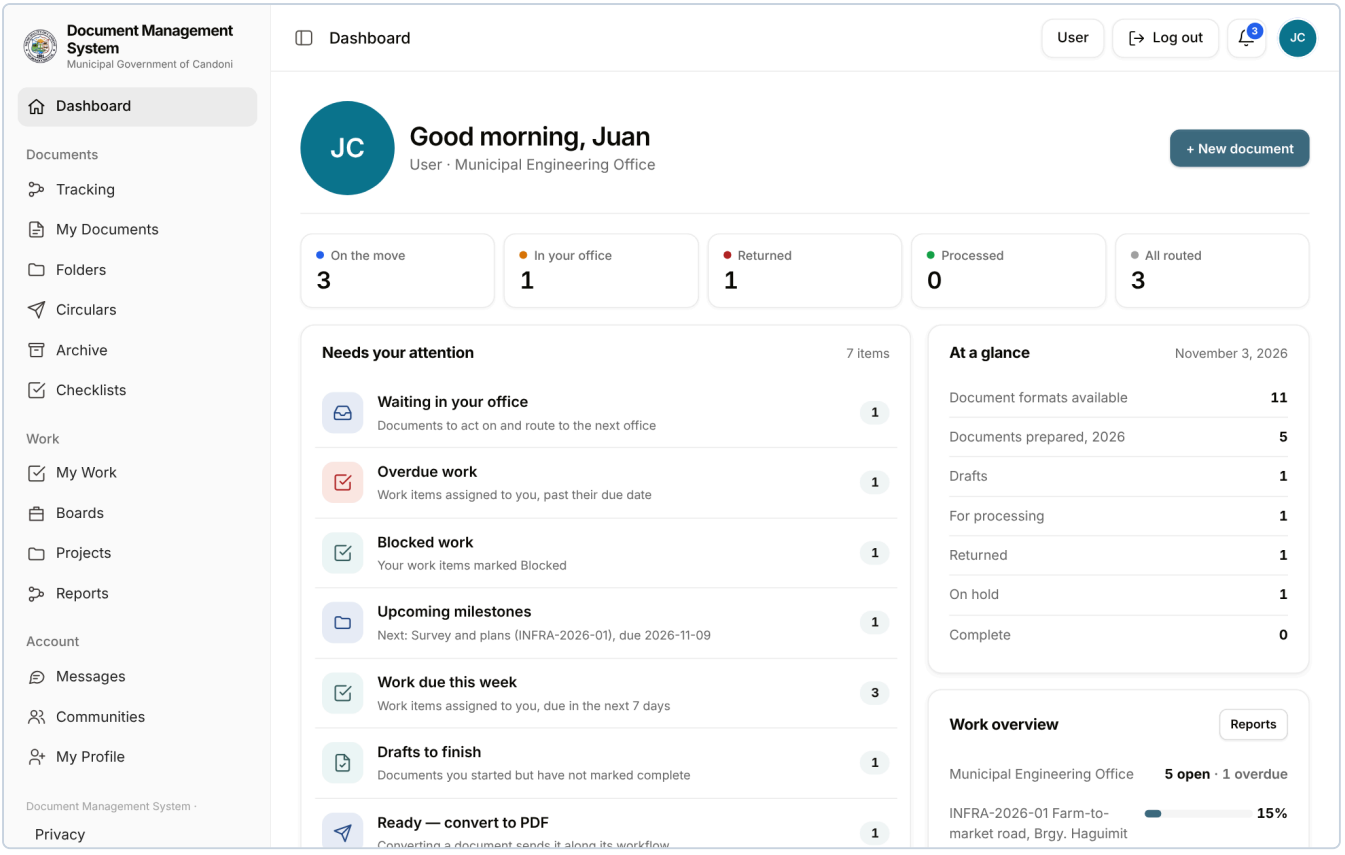

An open document page follows the document live. When someone signs, routes, returns, holds or declines it, the page and the signed PDF update without reloading. The Dashboard, Documents, Tracking, Notifications and Archive lists reload when a new notification arrives, and when you come back to the browser tab.

Handy things on every page

- ← **Back** returns to the page you came from.
- Dropdowns with more than 5 choices are searchable: click, type part of the choice, then pick it or press Enter.
- Choosing a person: type part of their name or email and pick them.
- Search boxes match every word you type, in any order.

4. Dashboard and My notes

The Dashboard is your starting page: what needs you now, your counts, your work and your own notes.

The Dashboard

- **+ New document** (top right): prepare or upload a document (sections 5 and 6).
- The tiles: how many of your documents are On the move, In your office, Returned, Processed and All routed. Click one to open Tracking with that filter.
- **Needs your attention**: your drafts to finish, documents waiting in your office, documents **waiting for your signature** (section 8), and your work items that are overdue, due today, blocked or due this week. Each opens the document or My Work.
- **Upcoming milestones**: project milestones due in the next 14 days.
- **At a glance**: your documents counted by status (Draft, For Processing, Returned, On Hold, For Signature, Complete, Cancelled).
- **Work overview**: open and overdue work per office, and the progress of ongoing projects. Each opens its report.
- **Recent documents**: your latest.
- **Archive backup due** (Records Officer only): a device that has not been backed up on schedule.

My notes

My notes keeps your private notes and reminders. Nobody else can see them, administrators included.

- Type a note and click **Add** (or press Enter).
- To be reminded on a day, click **+ Date** first. A note shows Today or Overdue when its date comes.

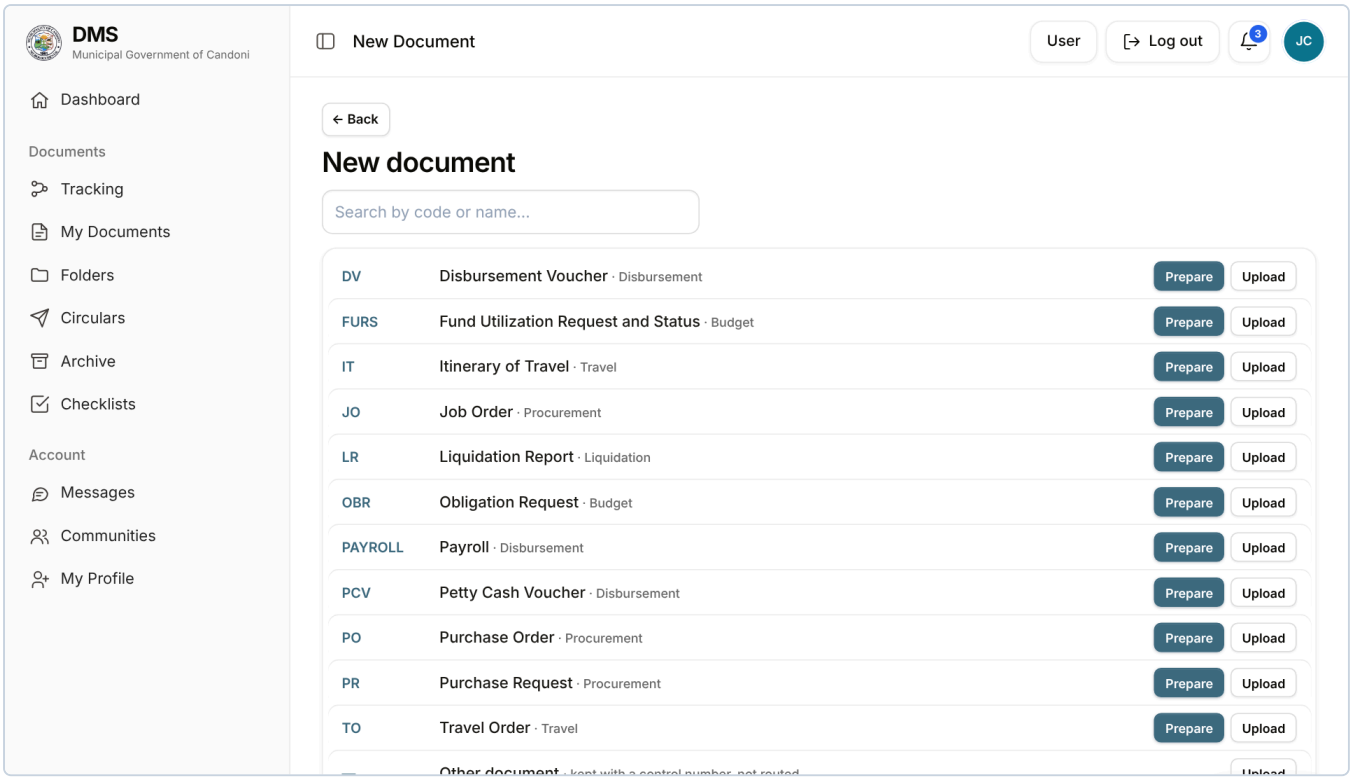

- Tick a note when it is done. It moves to **Archived**, where you can untick it to bring it back, or delete it with ×.

5. Preparing a document

A document is prepared in a few steps: choose the format, encode it, tick its checklist, choose its signatories if needed, review and save, then print and convert it to PDF.

Choose the format

1. Click **+ New document** (Dashboard or Documents).
2. Choose the type: DV, OBR, FURS, Payroll, PCV, Liquidation Report, Itinerary of Travel, Travel Order, PR, PO or JO.
3. Click **Prepare** to encode it in DMS. (**Upload** is for a file you already have: section 6.)

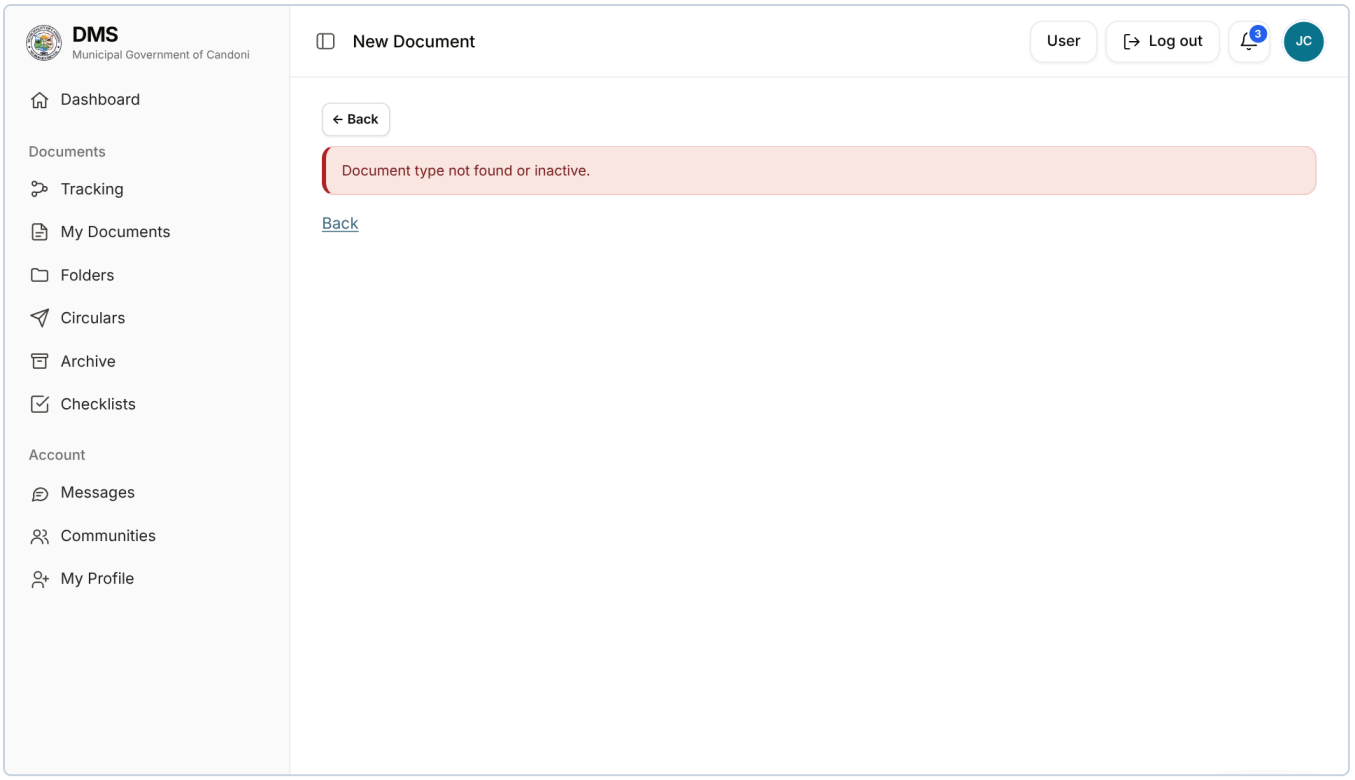

Choosing a format

Encode the details

- Fill in each guided step. The blue box gives the instructions; the preview on the right updates as you type.
- Entries print in capital letters, as on the official forms (a few fields, such as the Travel Order's purposes, print as typed).
- Fields marked * are required: you cannot go on until they are filled.
- **Fund** lists the funds in Settings (General Fund, Special Education Fund, Trust Fund, and any the administrator adds).
- Line items: click **+ Add row**. Enter deductions as negative amounts; they print in parentheses.
- Totals are computed as you type (the DV's Amount Due, the Liquidation Report's amount to reimburse).
- **Approved by**: on forms the Mayor approves, choose the Municipal Mayor or the Municipal Vice Mayor. With the Vice Mayor, the form prints the Vice Mayor's name and the route goes to that office.

- The printed names of signatories come from Settings. Each document keeps the names set when it was prepared.

Encoding a DV

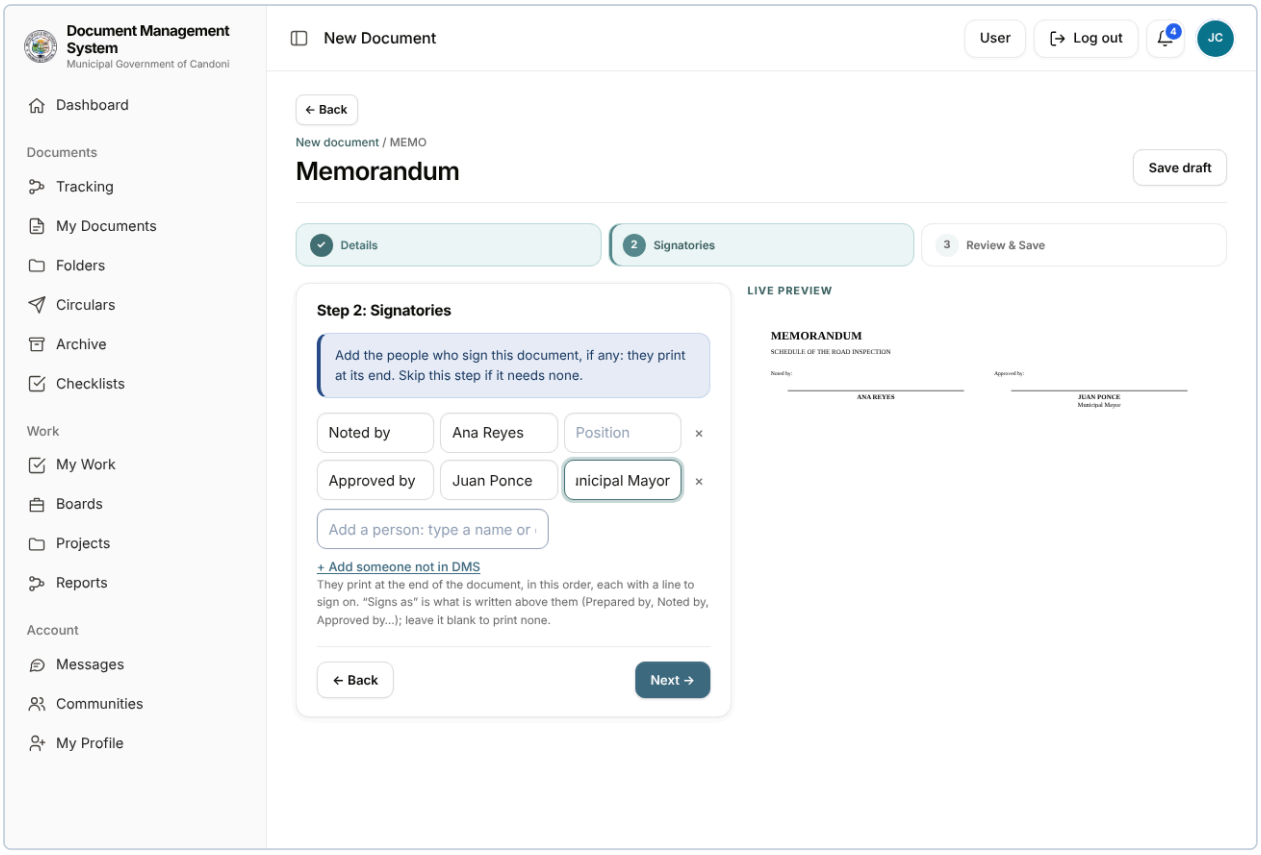

The checklist (DV and Liquidation Report)

- In the **Checklist** step, type a checklist number or words and pick the type of transaction. Its checklist loads.
- Tick **Y** for each document you attached, and **N/A** for items that do not apply. Always-required items have no N/A.
- Something attached that is not on the checklist? Under **Additional documents**, click **+ Add document** and type it.

Picked the wrong checklist? On the document page, click **Change checklist**. Answers to requirements found on both checklists are kept.

Signatories step NEW

A document type with no standard signatories of its own (a memo or letter, for example) has a **Signatories** step. Add the people who sign the document, in order, with what each signs as (Prepared by, Noted by, Approved by...), their name and position. They print in the signature block of the document. Types that already have their own signatories, such as the DV or the PCV, skip this step.

The Signatories step

Review and save

Review & Save lists what is still missing. **Mark complete** stays off until every required field and always-required item is done. The document gets a control number such as DMS-2026-000001.

Optional: send for review

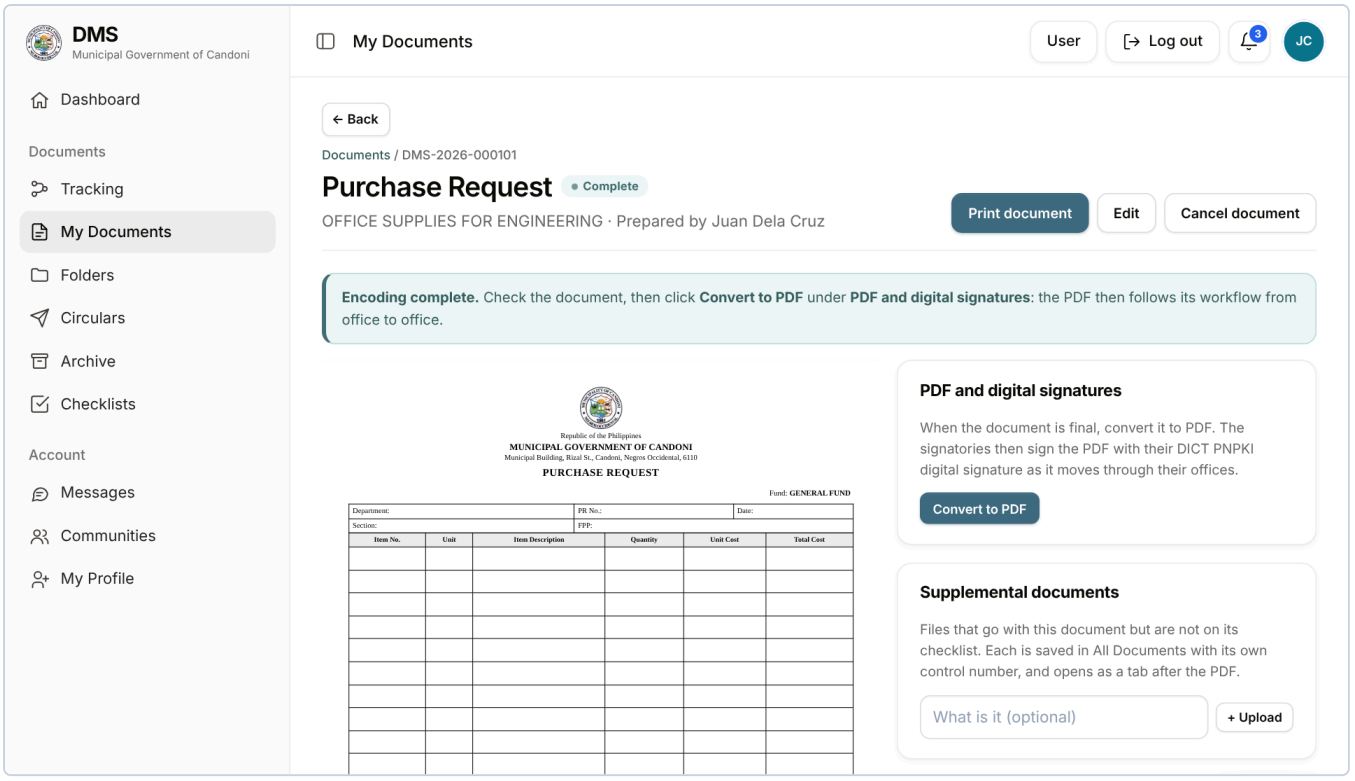

Before converting to PDF, you can ask anyone to read it first: in the **Review** card, choose a person, add a note and click **Send for review**. They see it under Forwarded to you (and in their Documents list) and write back under Your review. Nothing waits for the review.

Supporting documents on the document page

Under each checklist item:

- **+ Upload file**: a scanned PDF or a photo (JPG or PNG, up to 20 MB). The item is ticked Y. The file becomes a DMS document of its own, with its own control number and QR code.
- **+ Link document**: pick a document already in DMS of the kind the item asks for. Some types (such as an OBR) can be linked to only one document. Links are locked once the document is routed.
- **+ Add attachment** (under the checklist): a document that goes with this one but is not on its checklist.

Each linked or uploaded document opens as its own tab after the Checklist tab, numbered as on the checklist (such as 02 OBR). The Checklist card shows the ticked items only.

A document page

Print

- The tabs above the preview (such as DV and Checklist 1613) choose what prints. **Print** prints the tab you are on: print both, the checklist on top.
- Every form prints portrait on one page: the DV on Folio (8.5 × 13 in), the others on A4. Leave the print scale at Default.
- **Download all (ZIP)** (DV) gathers the DV, its checklist and every linked document as PDFs.

The buttons stay in the same place under the document's title, with **Print** last.

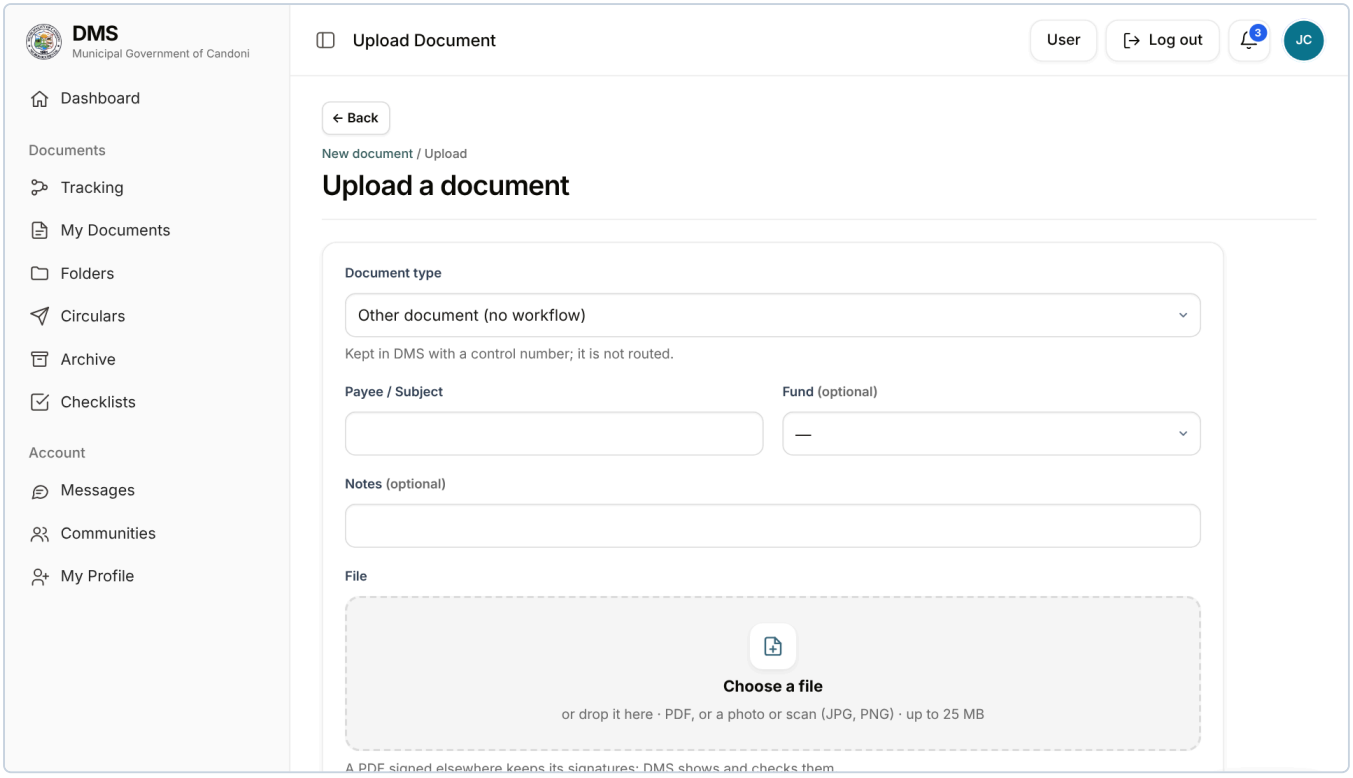

Edit, copy, cancel or delete

- **Edit** changes the document until it is signed or routed.
- **Copy** starts a new draft from this document.
- **Cancel document** cancels it (the preparer, at their own step).
- **Delete** removes a draft never converted to PDF.

6. Uploading a document

Upload a document that already exists as a file: a scanned or signed form, a letter, a certificate, a PDF from another system. It gets a control number and a QR code and follows its route like a prepared document.

1. Click **+ New document**, choose the type, then **Upload**. Or choose **Other document (no workflow)** for a file that follows no route, such as a certificate to be signed (section 8) or a file only kept.
2. Type the payee or subject; choose the fund and add notes if you like.
3. Choose the file (drag it onto the box, or click to browse): a PDF, or a photo or scan (JPG or PNG), which DMS turns into a PDF. Up to 25 MB.
4. Click **Upload**. DMS adds the QR code, saves the file and starts its workflow.

Uploading a document

The QR code on uploads

- Every uploaded PDF gets the QR code in the bottom-right corner of each page, whatever program made it, also on sideways pages.
- A PDF that is already signed gets the code in an update after its signatures, which stay valid. DMS's checks say DMS only added its QR code; anything else added after a signature is still reported.
- An older upload with no code shows *This PDF has no DMS QR code yet*. Its preparer or an administrator clicks **Add QR code**.

Supplemental documents UPDATED

Files that go with a document but are not on its checklist go in the **Supplemental documents** card: say what it is if you like, then **+ Upload** (a PDF, photo, scan or ZIP file). Each is saved in Documents with its own control number and QR code, and opens as a tab after the PDF.

Anyone on the document's route can add them: the preparer, and the staff of every office the document has reached, even after it has moved on. Supplemental documents are only added, never replaced; the preparer and administrators can remove one from the card (it stays in Documents).

Upload-only document types

An administrator can create a type that is never prepared in DMS, only uploaded, with its own route (section 20). It appears in Upload, not in Prepare.

7. PDF and signatures

A document leaves your office only as a PDF. Converting it starts its workflow; each signatory then signs the same PDF in turn, and every signature stays valid.

Convert to PDF

When the document is final, click **Convert to PDF** in the **PDF and digital signatures** card. DMS makes one PDF: the document, then its checklist (DV and Liquidation Report), with the QR code on every page. Its status becomes For Processing. The PDF tab shows it inside the page; **View PDF** opens it and **Download PDF** saves it. Changed it after converting but before anyone signed? Click **Convert** again.

One way to sign per person

You have	You sign with	Greyed out
A PNPKI certificate saved in My Profile	Sign with PNPKI, or Upload signed PDF from Acrobat	E-signature
No PNPKI certificate	E-signature	The PNPKI buttons

Signing is open at a workflow step that signs, to a person the document is referred to, and to the person whose turn it is on a signature request (section 8). Otherwise the buttons are greyed out.

Sign with PNPKI in DMS

1. Click **Sign with PNPKI**.
2. Choose a size for your mark (Small fits a DV signature line).
3. Tap the PDF where your signature goes (tap again to move it). On a signature request your mark starts in your box.
4. Optional: tick **Add text on the PDF**, type it and tap where it goes.
5. Type your certificate password (unless it is remembered on this device) and click **Sign PDF**.

Your mark appears with *Digitally signed by NAME* and the date and time. Untick **Place my signature mark** to sign without it.

Or sign in Adobe Acrobat

Click **Upload signed PDF**, download the current PDF, sign it in Acrobat or Foxit with your PNPKI certificate, change nothing else, and upload it. DMS checks that it is the same PDF with your signature added.

E-signature (no PNPKI)

Add your signature mark once in My Profile. Then click **E-signature** and tap where it goes. DMS puts your mark on the PDF with the words *e-signature*, your name and the date. It counts as the step's signature and shows as E-signed by. It is not a digital signature: the PDF carries no certificate.

See a signature

Click a signature on the PDF (or a name at the top of the PDF tab) to see whether it is valid, when it was signed, the reason, and the certificate: issued to, issuer (with a DICT PNPKI badge for DICT

certificates), validity and chain.

Versions

Versions keeps every version of the PDF: converted, each signature, reference numbers stamped. Nothing is ever overwritten.

Returned for revision

When a document comes back to the preparer's office, the preparer can **Edit** it, then click **Make a new PDF**. The signed PDF is kept, marked superseded, and signing starts over on the new one. Reference numbers already assigned stay.

The QR code and the public check page

Scanning the QR code opens the document's public page, with no sign-in. It shows whether the document is genuine, its type, control number, payee or subject and office; its reference numbers, where it is on its route, and who signed it and when; the current PDF; and **Check your copy**, which tells whether a PDF in hand is one DMS issued for this document.

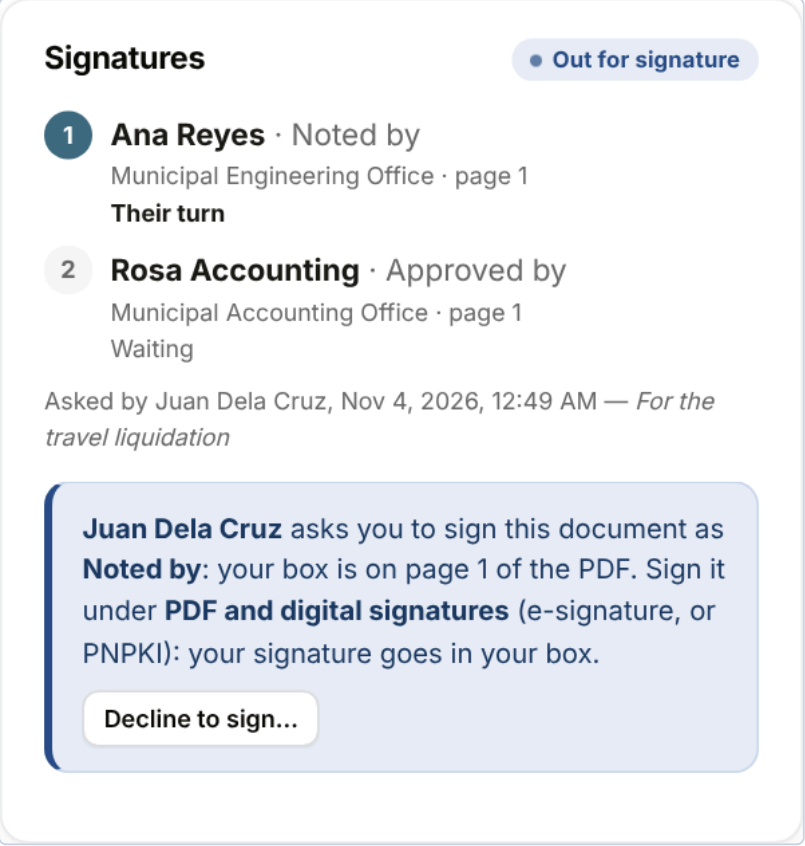

8. Asking for signatures NEW

A document that follows no route (for example a **certificate** uploaded as Other document, or a type with no workflow) can still be signed by the people who must sign it. The preparer chooses who signs, in what order, and where each one signs on the PDF.

Send it for signature

1. Open the document. In the **Signatures** card, click **Ask for signatures**.
2. **Add who signs**: type a name or email (the office head, the Mayor, anyone in DMS), in the order they sign. For each, type what they sign as (Noted by, Approved by…) if you like. ↑ changes the order; × removes someone.
3. For each person, click **Show where they sign** and tap the PDF where their signature goes. A box with their name shows there (tap again to move it).
4. Add a note if you like, then click **Send for signature**.

The status becomes For Signature.

The Signatures card: each signer in order, with their turn

When it is your turn

You are notified (Notifications, email, and **Waiting for your signature** on your Dashboard), and the document appears in your Documents list. Open it: the card says who asks you to sign and on which page your box is. Sign it under **PDF and digital signatures** (e-signature or PNPKI); your signature goes in your box. Then the next person is notified, and so on. The preparer is told as each one signs, and when everyone has.

If you cannot sign it, click **Decline to sign...** and say why. The request stops, the status becomes Returned, and the preparer is told; they can fix the document and **Ask for signatures** again.

Withdraw, ask for more, mark processed

- **Withdraw the request**: the preparer stops it while it is out. Signatures already on the PDF stay.
- **Ask for more signatures**: after everyone has signed, add more signers.
- **Mark processed**: once everyone has signed (status For Processing), the preparer clicks it. The document becomes Complete and moves to the Archive, where it can no longer be changed.

9. Workflow and statuses

After conversion, the PDF moves from office to office along the route set for its type. The **Workflow** card on the document shows every step, where the document is now, and who routed or returned it, when, and with what remarks.

A DV, for example, goes: your office → Municipal Accounting Office → Municipal Treasurer's Office → Office of the Municipal Mayor → Treasurer's Office → Accounting.

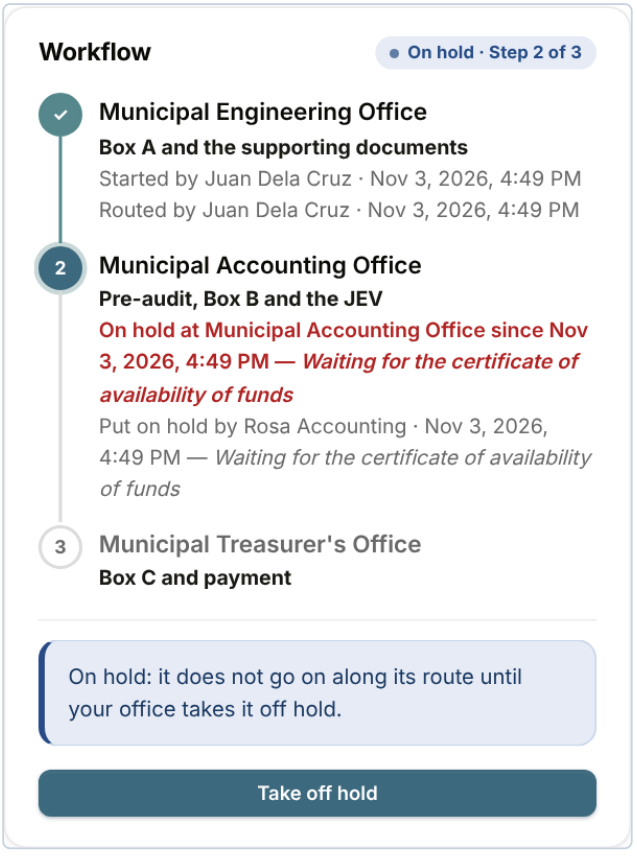

At your step

- **No receiving.** A routed document is at the next office at once. It appears in that office's Notifications under Waiting in, and the bell counts it.
- **Sign** if the step says *Must sign the PDF* (section 7). Routing stays off until you sign.
- **Route to ...** sends it to the next office. Add remarks if you like.
- **Return to ...** sends it back one office. Say why (such as *OBR not signed*).
- **Mark processed**, at the last step, closes the route. The document moves to the Archive.

The preparer cannot edit a document once it is routed, until it is returned to their office.

Put on hold NEW

The office holding a document (from the second step on) can click **Put on hold...** and say why, for example while it waits for a missing certification. The document stays with that office and cannot be routed, returned or referred until the office clicks **Take off hold**. The preparer is told both times, and the Workflow card shows since when and why it is on hold.

A document on hold

Statuses NEW

Every document shows one status, in every list and on its page. The Documents list can be filtered by status, and the Dashboard counts them under At a glance.

Status	Meaning
Draft	Being prepared; not yet converted to PDF.
For Processing	Converted to PDF (or uploaded) and on its way along its route; or signed by everyone on a signature request, waiting to be marked processed.
Returned	An office returned it (until it is routed on again), or someone declined to sign it.
On Hold	An office put it on hold.
For Signature	A signature request is out (section 8).
Complete	Its route is done, or it was marked processed. It is in the Archive.
Cancelled	Cancelled by its preparer.

Choosing offices (Mayor or Vice Mayor)

Some steps can be handled by another office instead, such as the Office of the Municipal Mayor or the Office of the Municipal Vice Mayor. The preparer chooses in the Workflow card and clicks **Confirm these offices** before the document first leaves their office.

Who in the office acts (positions)

A step can name positions, such as Reviewer in Accounting. Only people of that office holding one of those positions, and the office head, can sign and route it there.

Reference numbers (DRN)

When a step assigns a number (the DV No., the Travel Order No.), DMS fills in the next one and today's date when someone of that office first opens the document there.

- The number is a suggestion: **Edit** changes the number or date until it is on the PDF.
- Put it on the PDF: tap where it goes while signing, or click **Place it**, tap the PDF and **Stamp it on the PDF**.
- Routing stays off until the number is on the PDF.
- Wrong number? **Change it** takes it off (and anything added at that step since) until the document is routed.

The DRN column in lists shows reference numbers only.

Fill in details or upload a file before routing

Some steps ask for details (the Treasurer's Check/ADA No., Check/ADA Date, Bank Name) or a file (the DV signed by the payee in Box E). The Workflow card shows them; routing stays off until both are done.

Refer to a person outside the route

Users allowed by an administrator (and all administrators) see **Refer to a person...** while the document is with their office. Pick the person and say what they should do. The document goes to their

Notifications (Referred to you) and their Documents list. They act on it (they can sign) and click **Send back**; it returns to the office that referred it, and the route goes on.

Third-party steps (supplier, payee)

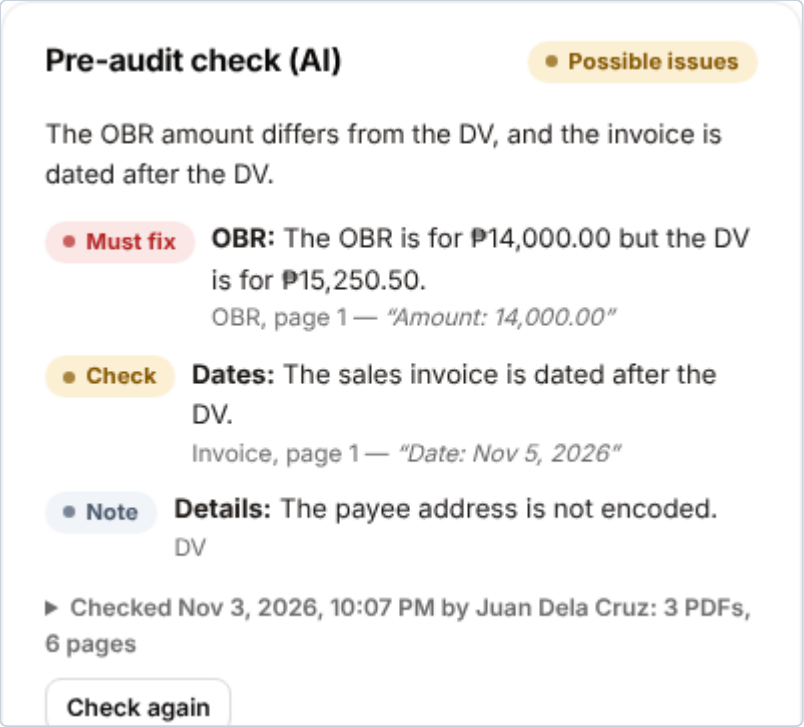

A route step can be for a third party instead of an office (such as the supplier's conforme on a PO). When the workflow starts, the preparer names the person in the Workflow card and clicks **Confirm**. At that step the document is with that person: they sign if the step signs, then route or return it.

The preparer is kept informed

The person who prepared a document is notified each time it is routed, returned, held, referred, signed, numbered or processed, with who did it and their remarks.

10. Pre-audit check (AI) NEW

On a Disbursement Voucher that has been converted to PDF, the **Municipal Accounting Office** can run a check with AI in the **Pre-audit check (AI)** card. Only Accounting staff and the Accounting head can run it; someone with more than one office switches to Accounting first. Others who may open the DV see the result once Accounting has run it.

The Pre-audit check (AI) card

1. Open the DV and click **Run pre-audit check**. It takes a minute or two; you can keep working.
2. It reads the DV as encoded, its checklist as ticked, and every PDF attached to it: checklist attachments, linked DMS documents such as the OBR, step uploads and supplemental documents.
3. It lists what a pre-auditor may question, each marked Must fix, Check or Note: amounts in figures and words, totals, the OBR, invoice and PO; the payee; the order of dates; signatures; a required checklist item not ticked; an attachment that is not what its item says; unreadable pages.

The result stays on the DV, with who ran it and when. **Check again** reruns it; the card says when the DV or its attachments have changed since. It reads at most 15 PDFs and 80 pages, and each person can run it 20 times a day.

> The check only suggests. It can miss or misread things, it changes nothing on the DV, and it never approves, returns or routes it. The Accounting Office decides.

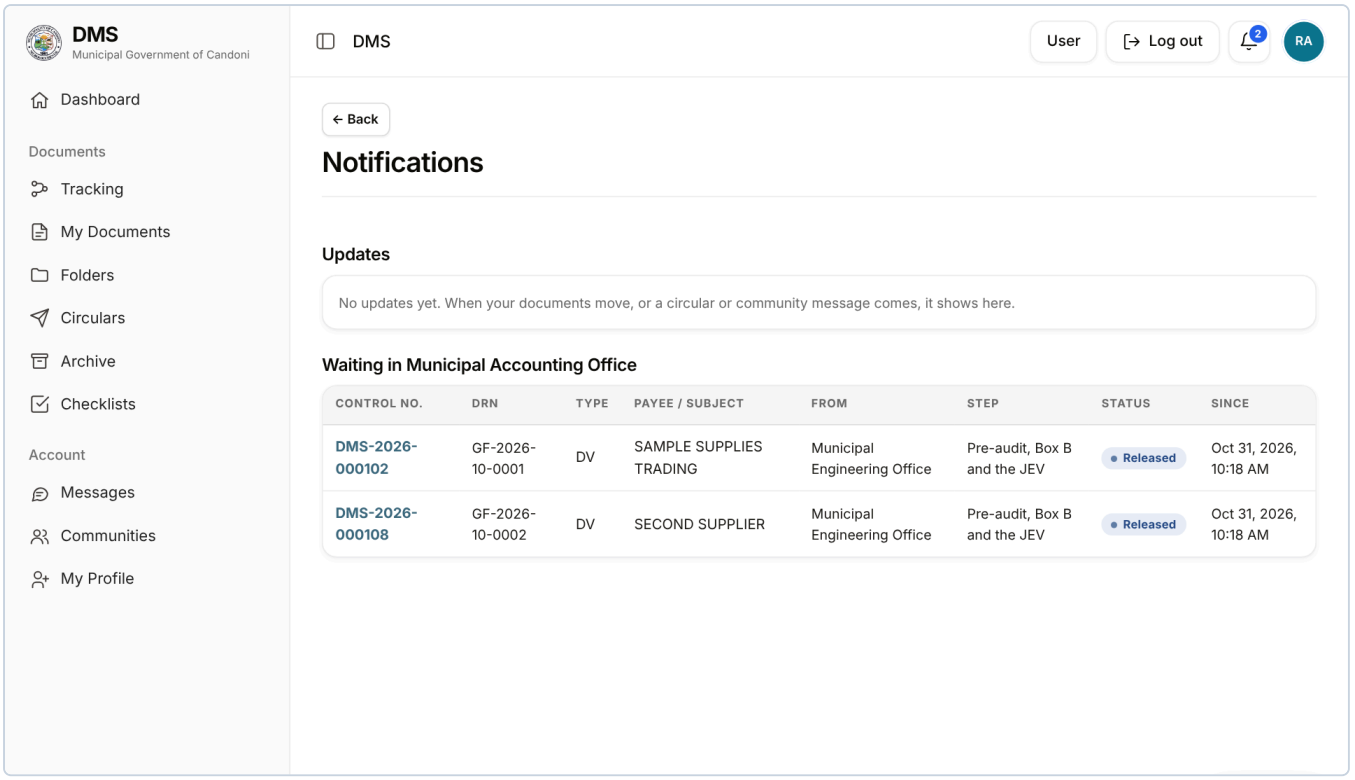

11. Notifications and Tracking

Notifications tell you what needs you; Tracking shows where every routed document is.

Notifications (the bell)

Click the bell at the top right. The number on it counts everything new or waiting.

- **Updates**: what happened to documents you prepared, signature requests, circulars for your office, work items assigned to you, mentions, deadline reminders, and communities you were added to. New ones are highlighted. Click one to open it; **Mark all as read**, or × to remove one.
- **Circulars to receive**: circulars for your office not yet marked received.
- **Waiting in your office**: the documents your office must act on now.
- **Forwarded to you** and **Referred to you**: documents sent to you for review or action.

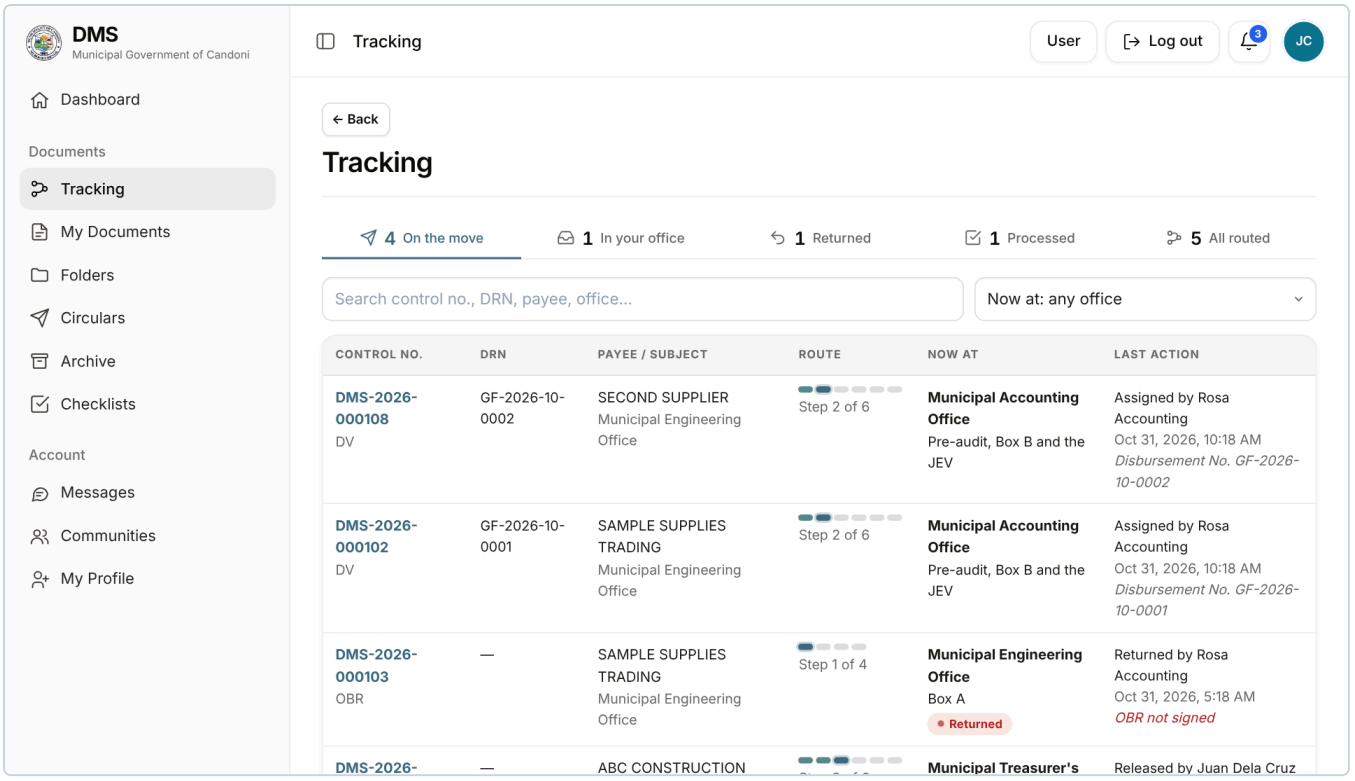

Notifications

Tracking

Tracking (menu) lists every routed document you can see: where it is now, its progress along the route, and the last action with remarks.

- The tabs across the top filter it: On the move, In your office, Returned, Processed, All routed.
- **Now at** filters by the office holding it.
- Search by control number, reference number, payee or office.

Tracking

12. Documents, Folders and access

You see the documents you prepared, the documents that have reached your office, the ones forwarded or referred to you, the ones you are asked to sign, and the ones you were given access to. Office heads see every document of their office; administrators and the Records Officer see all.

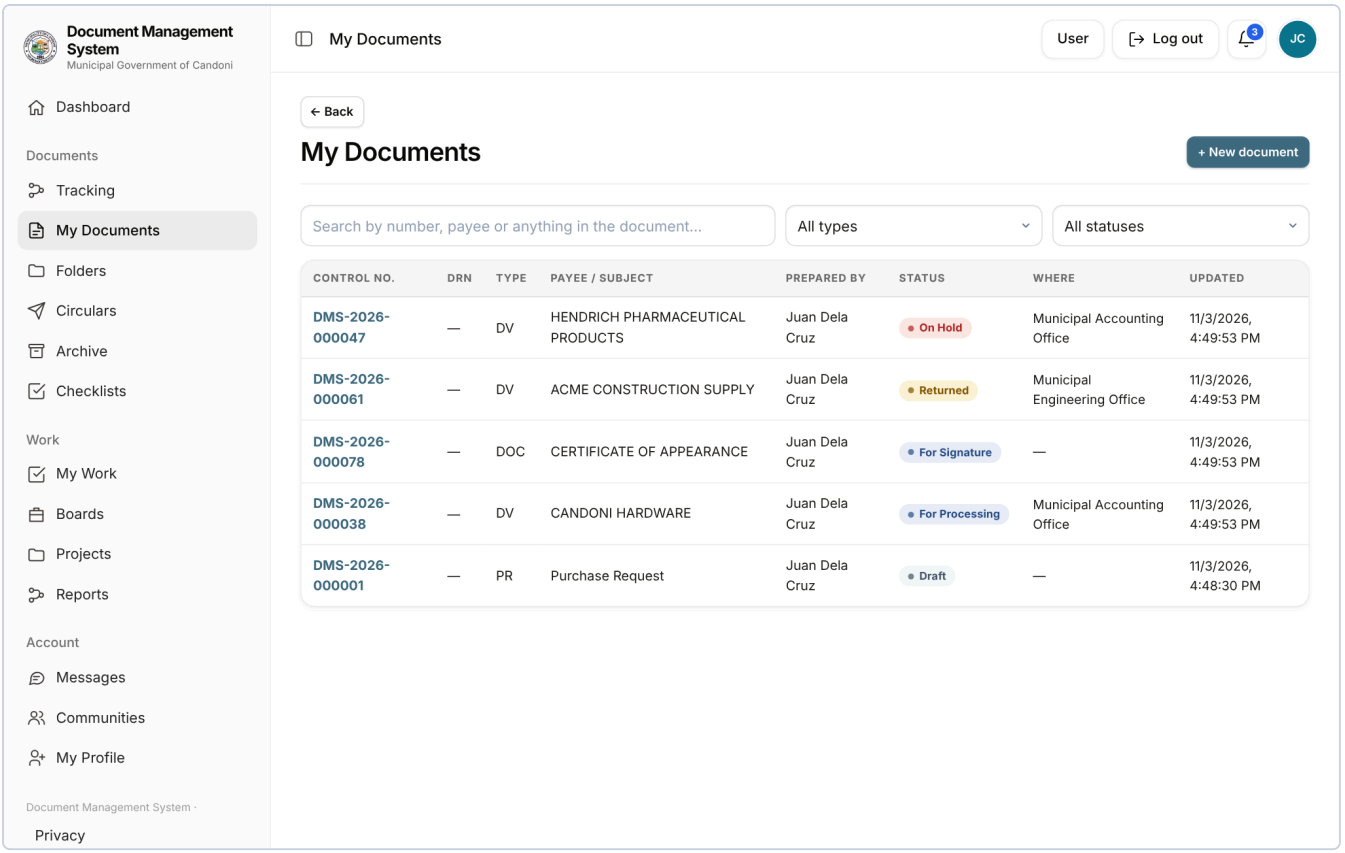

Who sees what

Person	Sees
Preparer	Their own documents, always
Office staff	Documents that have reached their office on their route (also after they move on), plus what the office head gives them
Office head	Every document of the office, and every document that has reached the office on its route
Records Officer, administrators	Every document (the Records Officer read only)
A person a document is forwarded or referred to, or asked to sign	That document, also listed in their Documents and Tracking

An office sees a document only once it reaches that office, not while it is still on its way.

Documents

The Documents page lists your documents with their status and a **Where** column. Search by control number, DV/OBR number or payee, and filter by type, office and status. Administrators and the Records Officer also have **Download ZIP**: the current PDF of every matching document between two dates, in a folder per type, with an index.

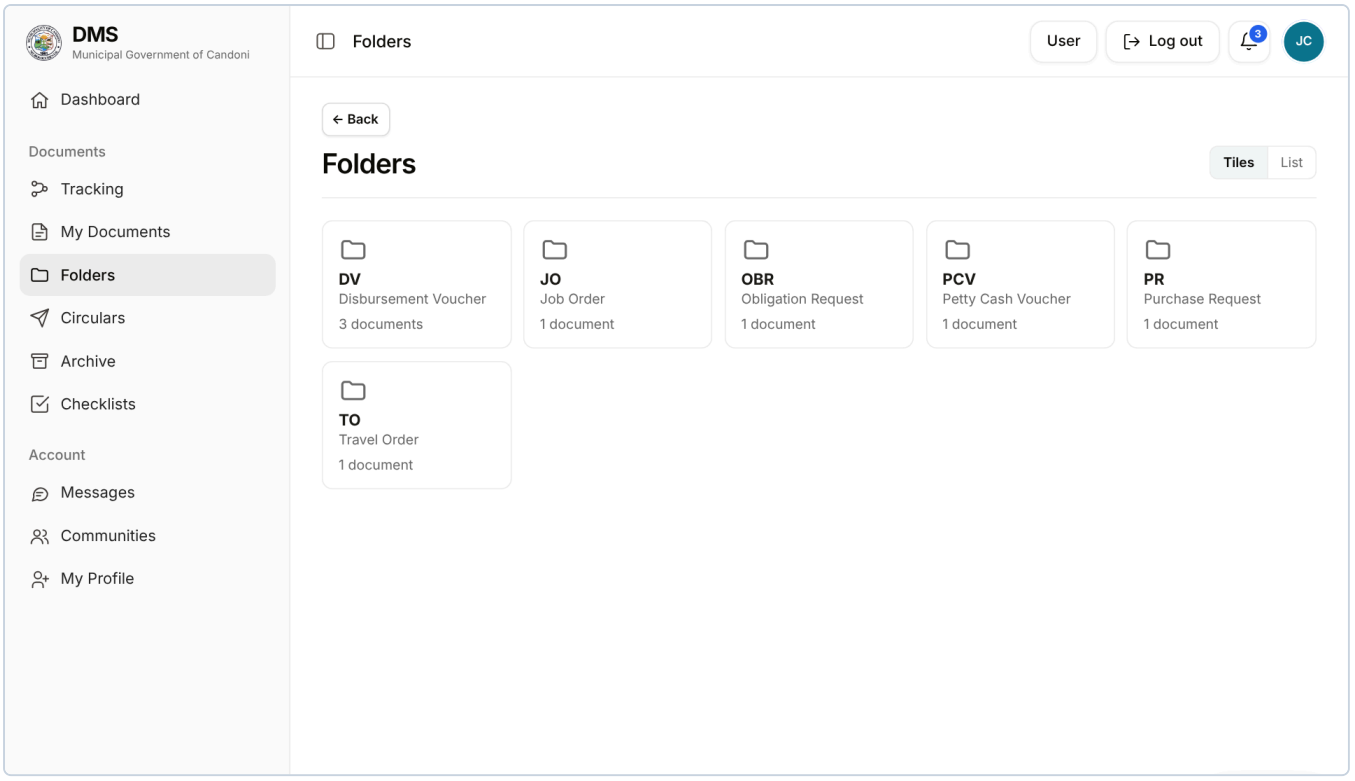

Documents, with their statuses

Folders

Folders groups the same documents in a folder per document type (DV, OBR, PR, Travel Order...), prepared or uploaded. Cancelled documents are left out.

- Each folder shows how many documents it holds and when one last changed.
- Open a folder to see its documents; search by control number, DRN, payee or preparer.
- **Tiles** or **List** (top right) switches the view. DMS remembers your choice on that device.

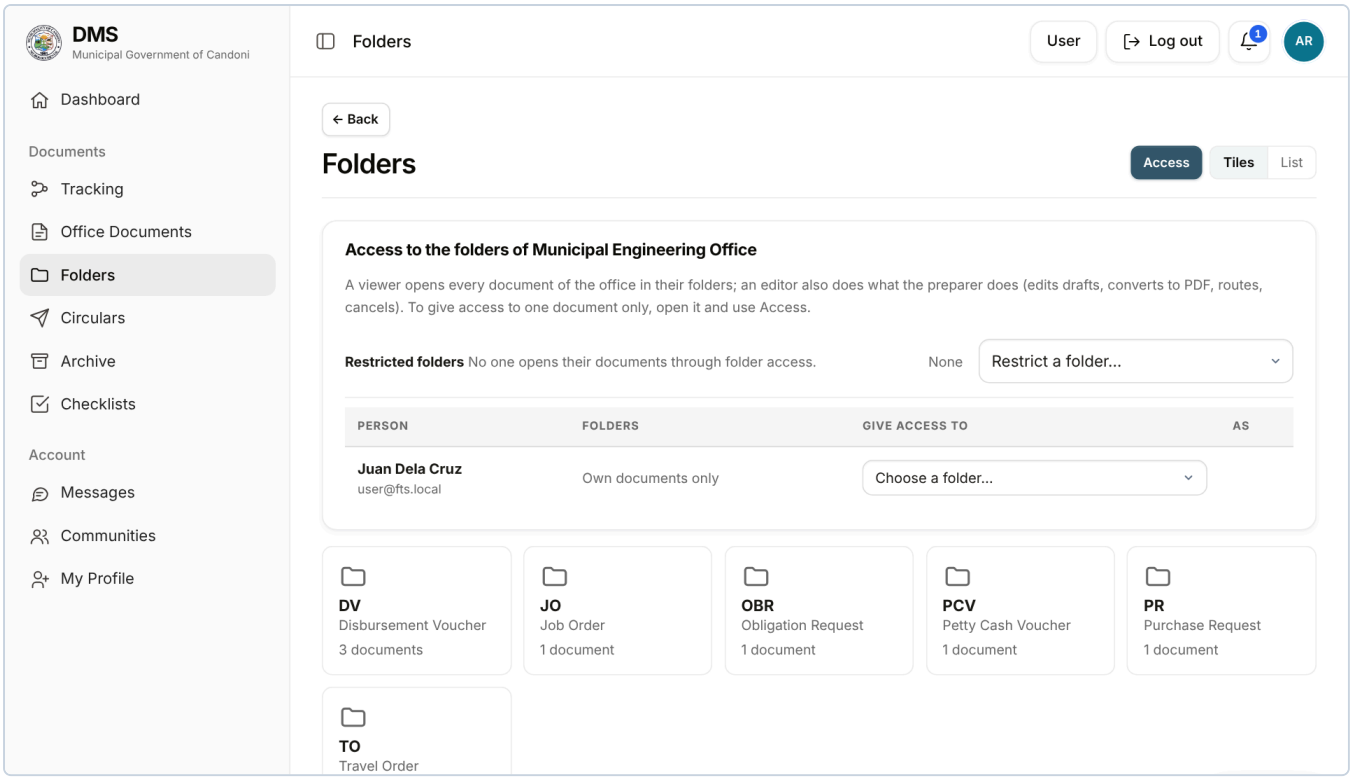

Folders

Giving access (office head, Records Officer, administrators)

Besides the preparer, other people of the office can be given access as **Viewer** (opens the document and its files) or **Editor** (does what the preparer does: edits the draft, converts it to PDF and signs it, routes it from the preparer's step, cancels it, deletes a draft).

To a whole folder: open Folders and click **Access** (Records Officer and administrators: first choose the office). Under **Give access to**, choose a folder or **All folders**; under **As**, choose Viewer or Editor. × on a folder removes it.

Folder access

To one document: open it. In the **Access** card, choose Viewer or Editor, click **+ Give access** and pick someone of the office. Each change is recorded in History.

Restricting documents

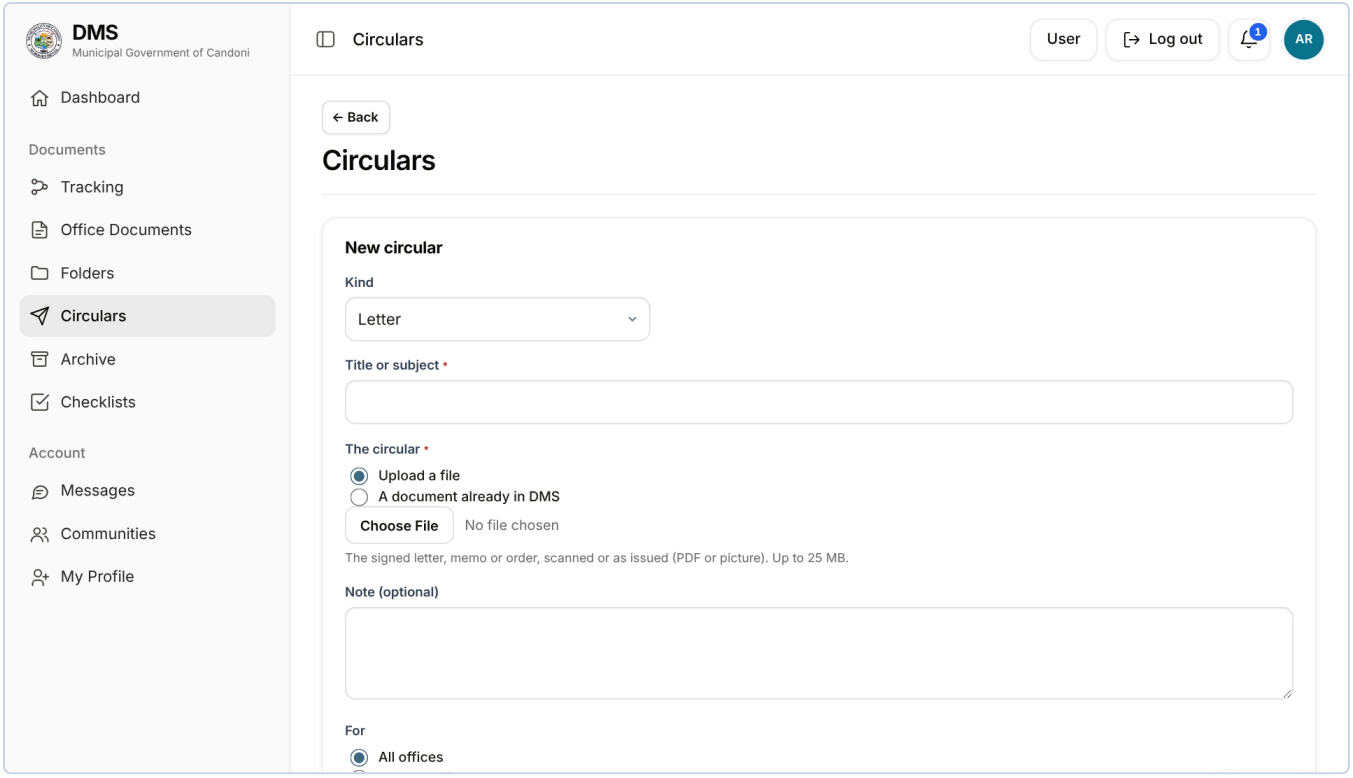

The office head can keep documents from the staff: in Folders → Access, **Restrict a folder...**; or on one document, tick **Restricted** in its Access card. A restricted document is still seen by its preparer, the office head, administrators and the Records Officer, by the offices on its route while they act on it, and by people given that document one by one. Only the office head, administrators and the Records Officer change access and restrictions.

13. Circulars

Circulars are letters, memorandums, executive orders, office orders, notices and the like that an office head sends to other offices, with a receipt from each office.

Send a circular (office heads and administrators)

1. Open Circulars and click **+ New circular**.
2. Choose the kind and type the title (and a note if you like).
3. Attach the file: **Upload a file** (a PDF or picture), or **A document already in DMS** (its current PDF goes with the circular).
4. Send it to **All offices** or **Chosen offices**, then click **Send**.

Circulars

Receive and follow up

Open it from Notifications (Circulars to receive) or from Circulars, read the file, then click **Mark received** for your office. One person per office marks it received, and the sender is notified. On the circular, **Received** shows which offices have received it, by whom and when, and which have not yet.

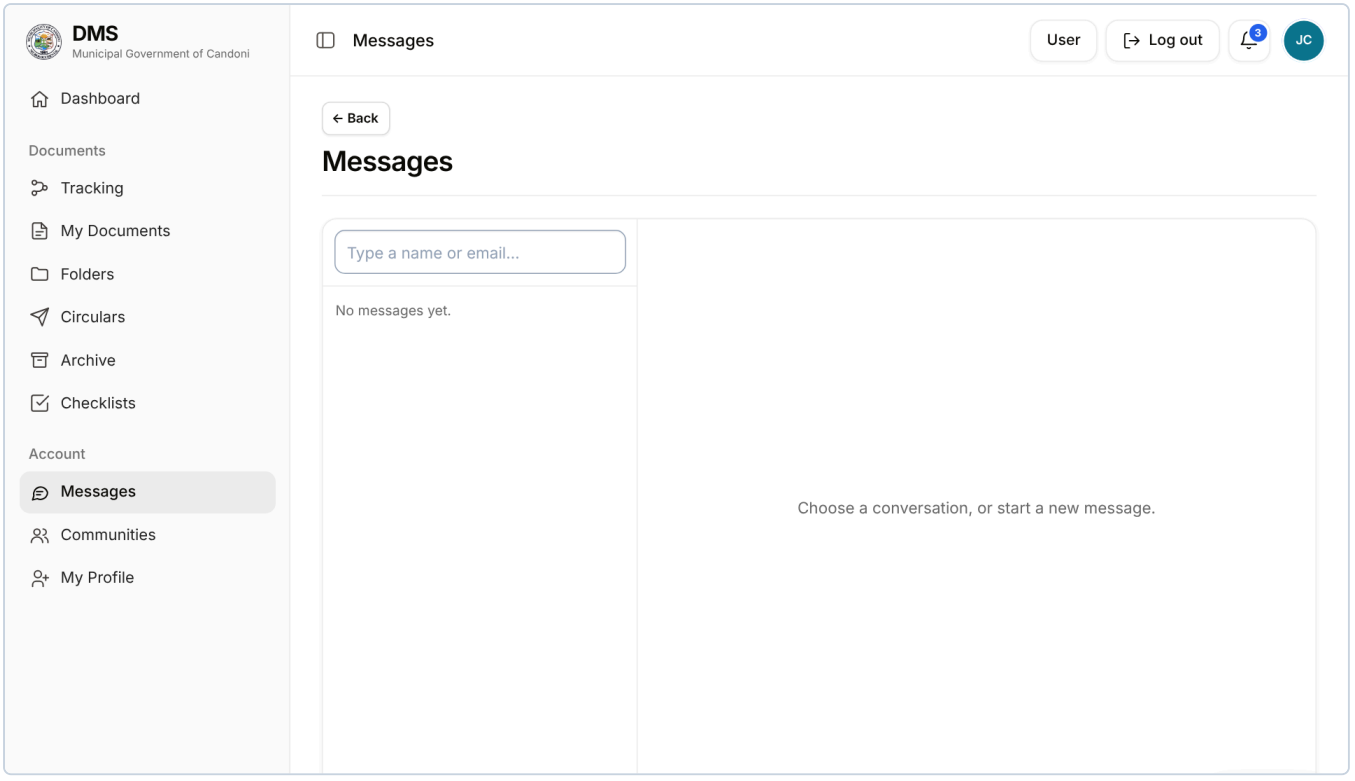

14. Messages and Communities

Messages are private one-to-one conversations; Communities are group chats for people who work together across offices.

Messages

1. Open Messages and click **+ New message**.
2. Type a name or email and pick the person.
3. Write and press Enter to send (Shift + Enter starts a new line).

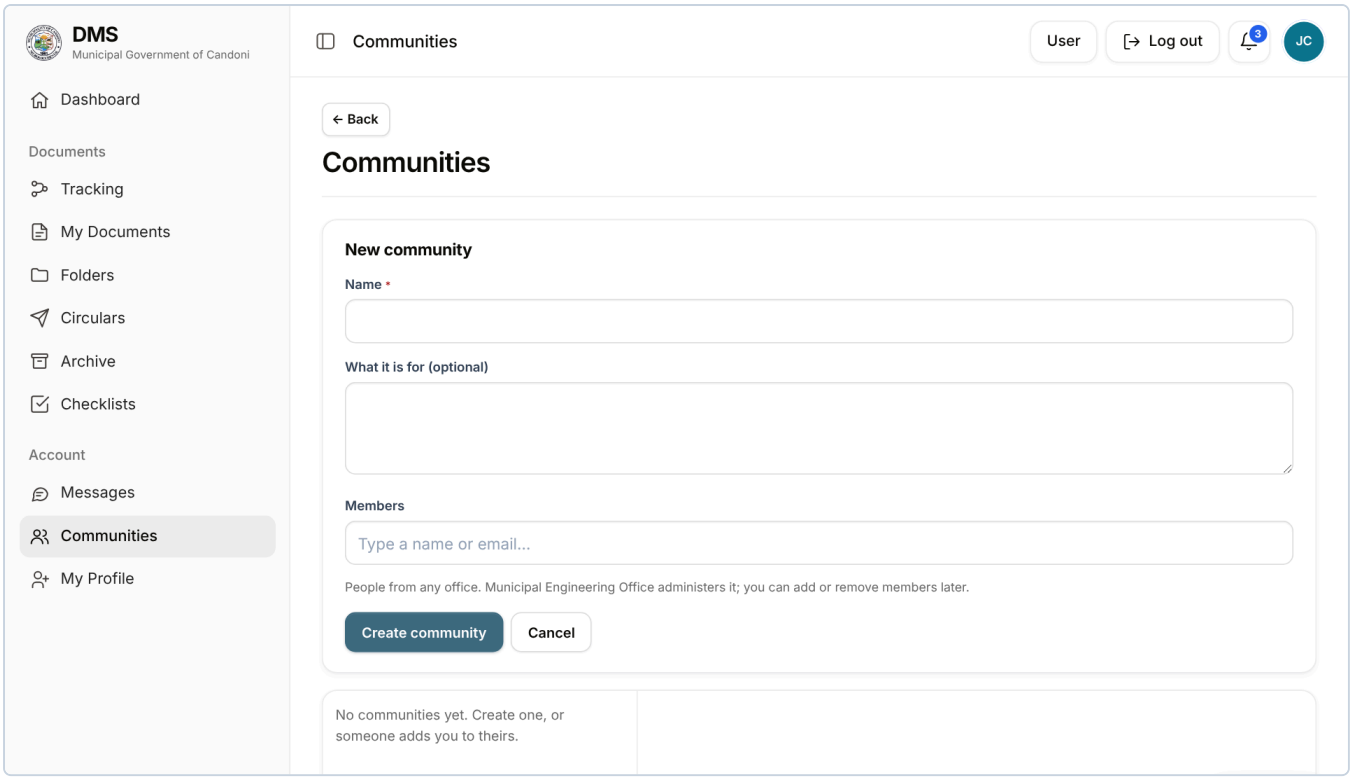

Replies appear at once, and the menu shows how many conversations have something new. Only the two people in a conversation can read it, administrators included.

Messages

Communities

- Open Communities and click **+ New community**. Name it and add members from any office. New members are notified.
- Members write messages and share files with the 📎 button.
- **Manage** (the creator, the head of their office, and administrators): rename it, add or remove members, or delete it.
- **Leave**: any member can leave under Members.

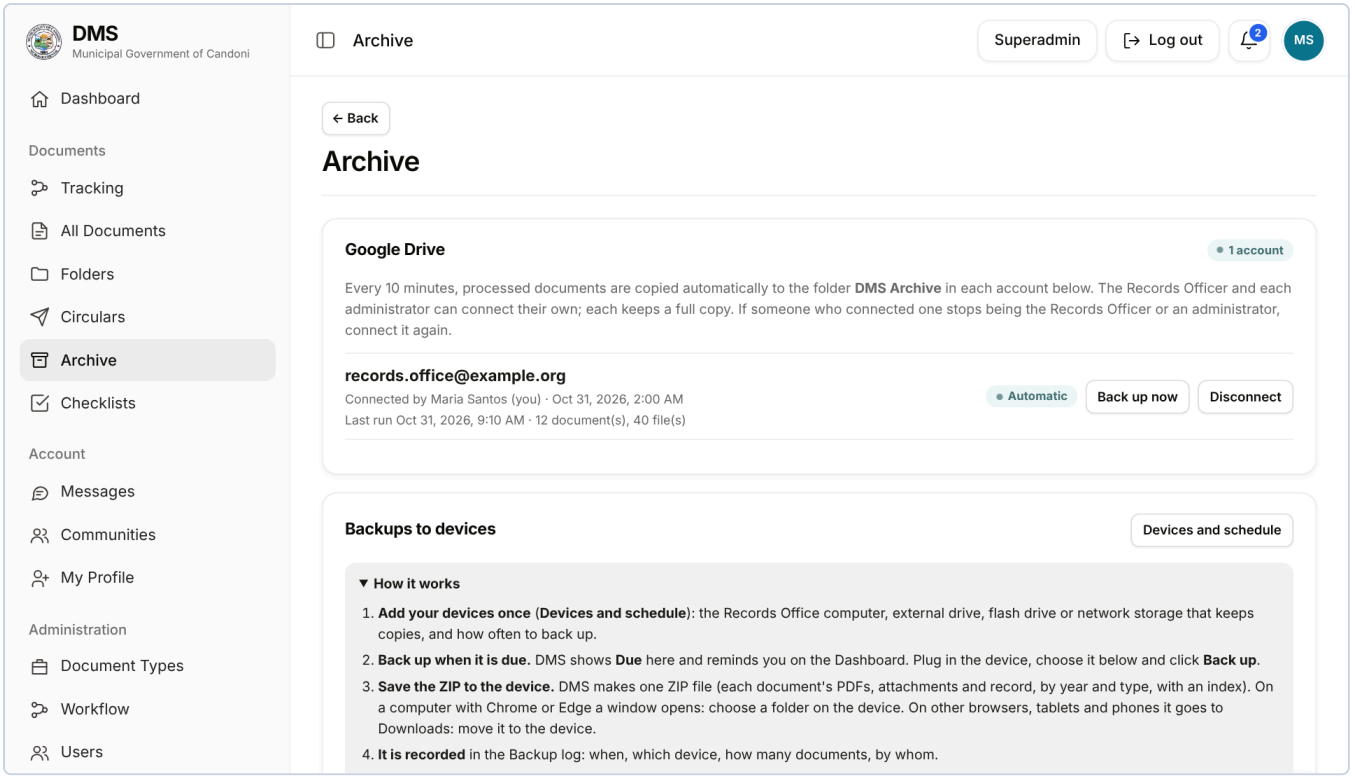

Communities

15. Archive and backups

When the last office marks a document processed (or the preparer marks a signed document processed), it leaves Documents and is kept in the Archive with its supporting documents. The Records Officer (and administrators) control the Archive and its backups.

Find an archived document

Everyone sees the processed documents they may open. Search by control number, DV/OBR number, payee or where it is filed, and filter by year, type and office.

Archive

Record where the paper is filed (Records Officer)

Under **Filed at**, click **Record where it is filed** (or **Change**): the cabinet, box or shelf, and a note.

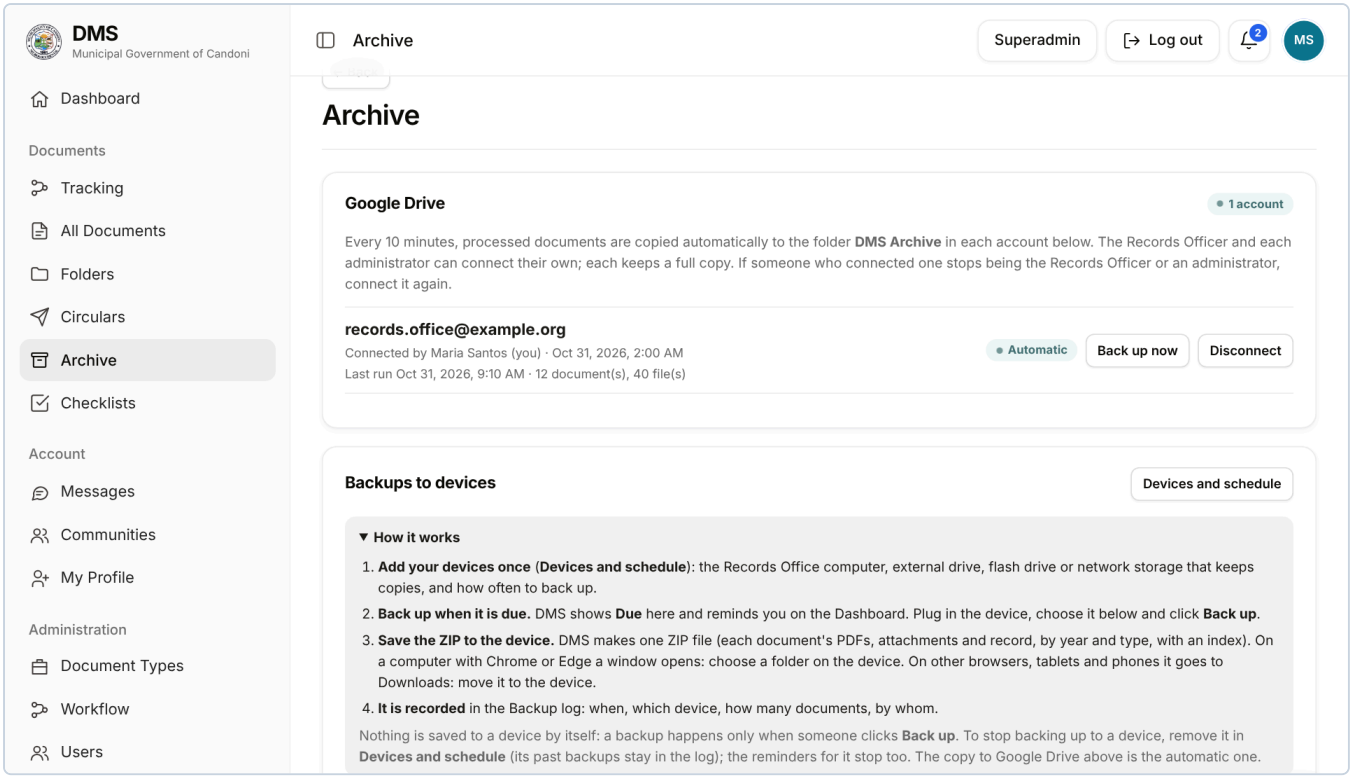

Automatic backup to Google Drive

Every 10 minutes, DMS copies each new or changed processed document to the folder **DMS Archive** in each connected Google Drive: by year and type, a folder per document with its PDFs, attachments and record.

- On Archive, click **Connect Google Drive** and sign in with the Google account that keeps the backups.
- The Records Officer and each administrator can connect their own account (**Connect my Google Drive too**). Each Drive keeps a full copy.
- Each account shows who connected it, the last run and any problem. **Back up now** runs it at once. **Disconnect** stops it; the files stay in that Drive.

Backups to devices (by hand)

- **Devices and schedule**: add each device (a name and where it is kept) and how often to back up (every 7 days unless changed). Click **Save**.
- When a device shows **Due** (also on the Records Officer's Dashboard), plug it in, choose it, choose **New and changed since the last backup to it** or **Everything in the archive**, and click **Back up**.
- DMS makes one ZIP with each document's PDFs, attachments and record, by year and type, with an index. The backup is recorded in the **Backup log**.

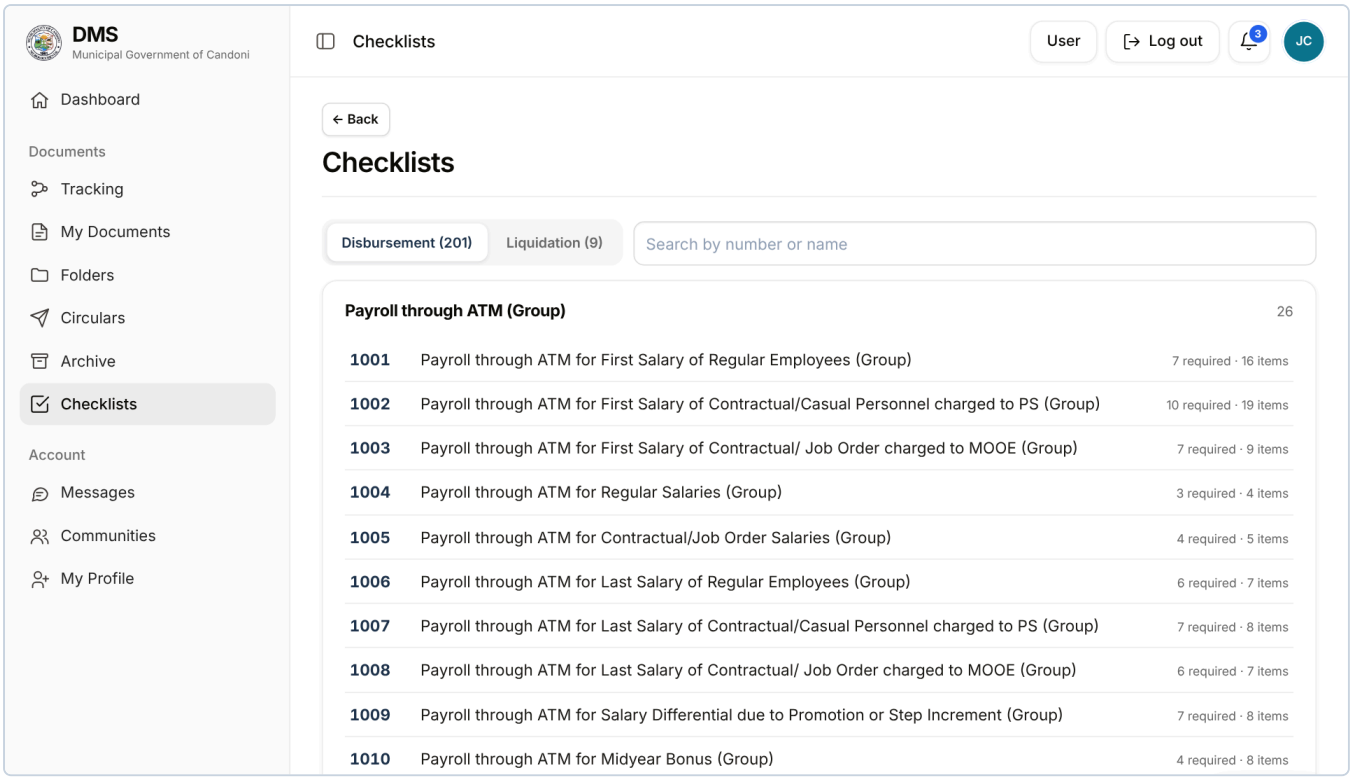

Backups to devices

16. Checklists library

Checklists holds the Municipal Accounting Office's checklists of requirements for disbursements and liquidations, grouped by category.

- Use the **Disbursement** and **Liquidation** tabs, and search by number or words.
- Open a checklist to read it or print a blank copy.
- An item with only a Y box (N/A shaded) is always required. An item with Y and N/A boxes is required only if it applies.
- Each requirement has a Document Type (its generic name, such as BAC Resolution) and Document Details (the instruction that specifies it).

The Checklists library

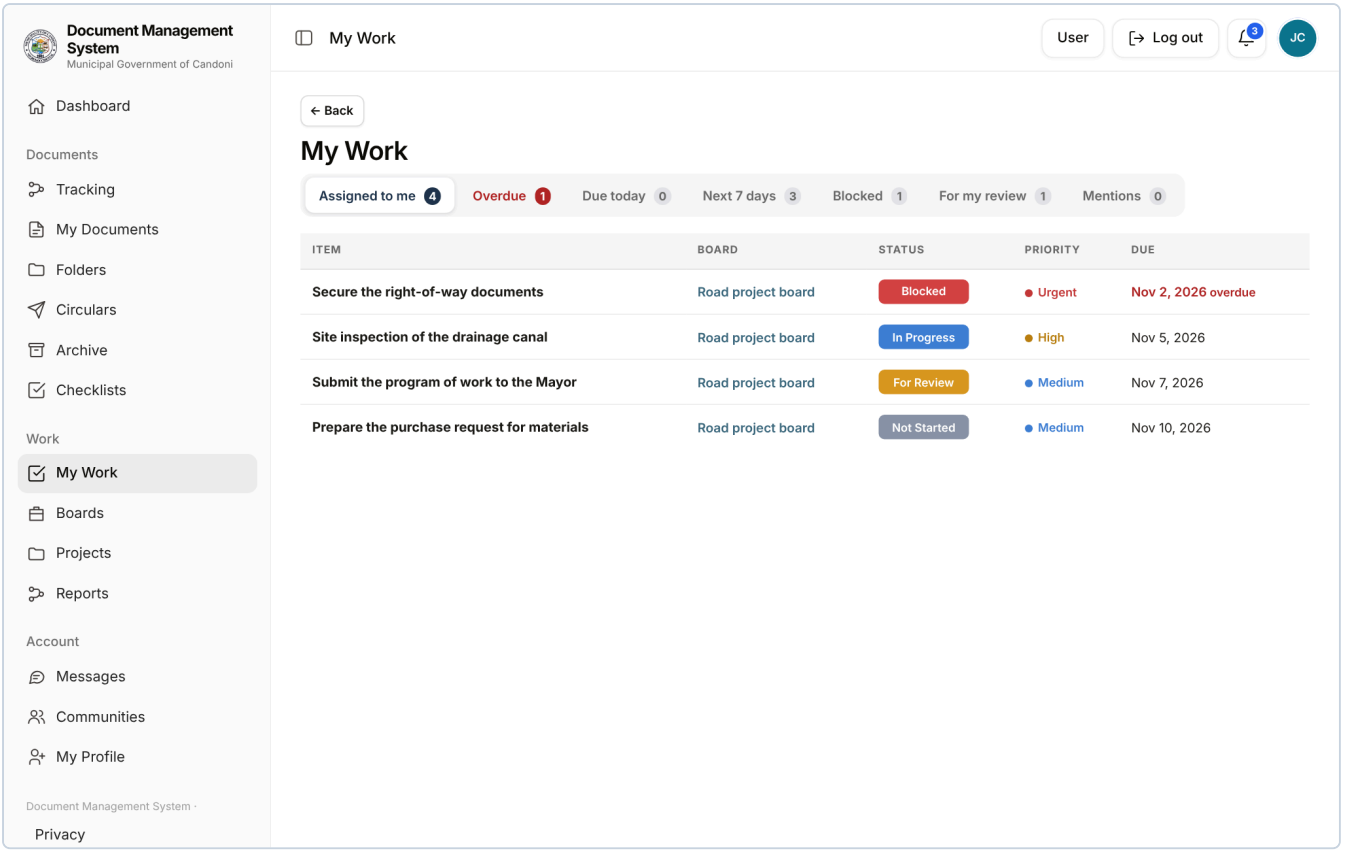

The DV and the Liquidation Report use these checklists in their Checklist step (section 5). Administrators add, edit and delete checklists (section 20).

17. Work management: My Work and Boards NEW

Boards organize the work of an office, a transaction or a project: who does what, and by when. The documents themselves stay in DMS with their own route and approvals; a work item only links them.

My Work

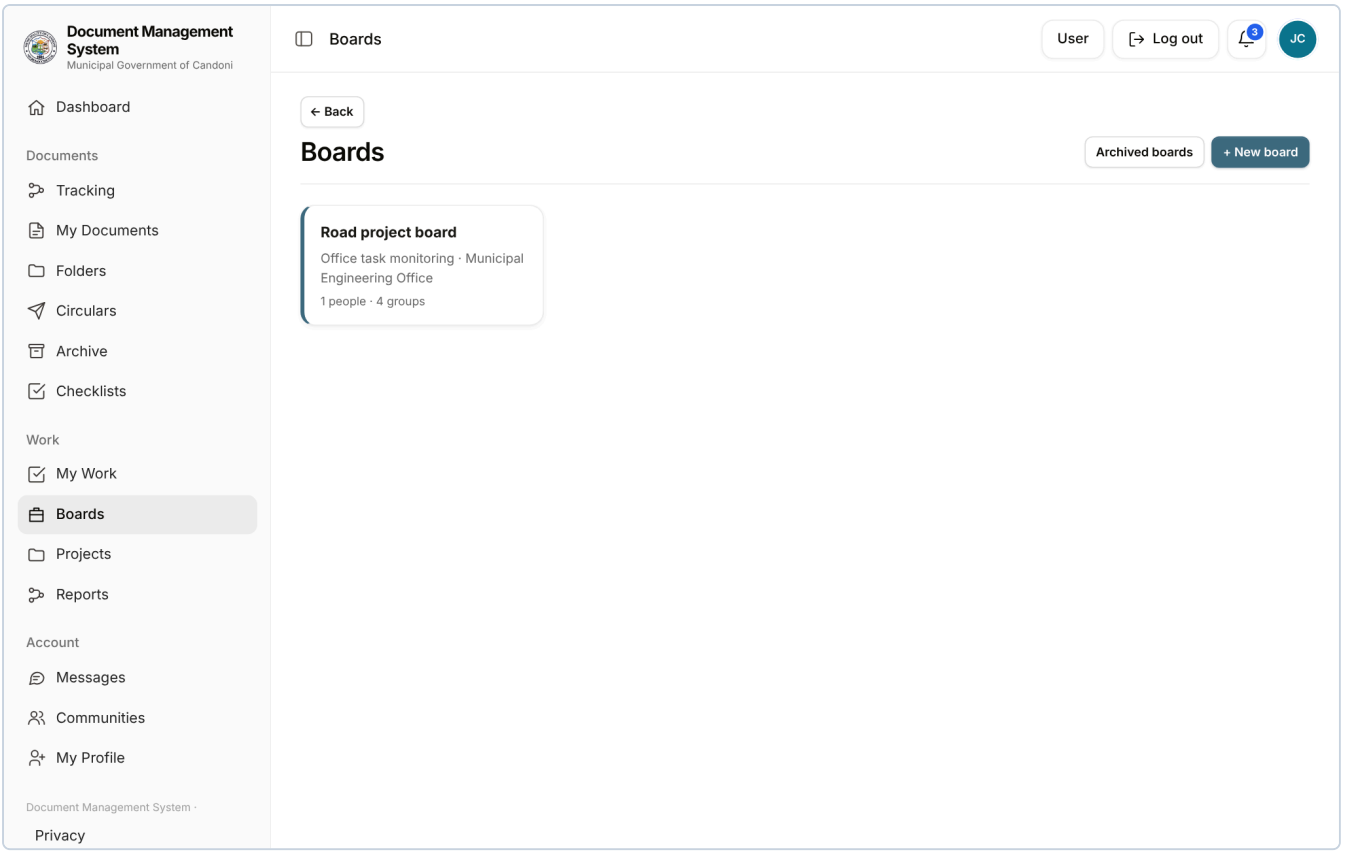

My Work (menu, under Work) lists the open work items assigned to you on every board, in tabs: **Overdue**, **Due today**, **Next 7 days**, **Blocked**, **For my review** (items you created that someone marked For Review) and **Mentions**. Due dates are calendar days in Philippine time; a completed item is never overdue.

My Work

Boards

Boards (menu, under Work) lists the boards you are on and the boards of your office, each with its color.

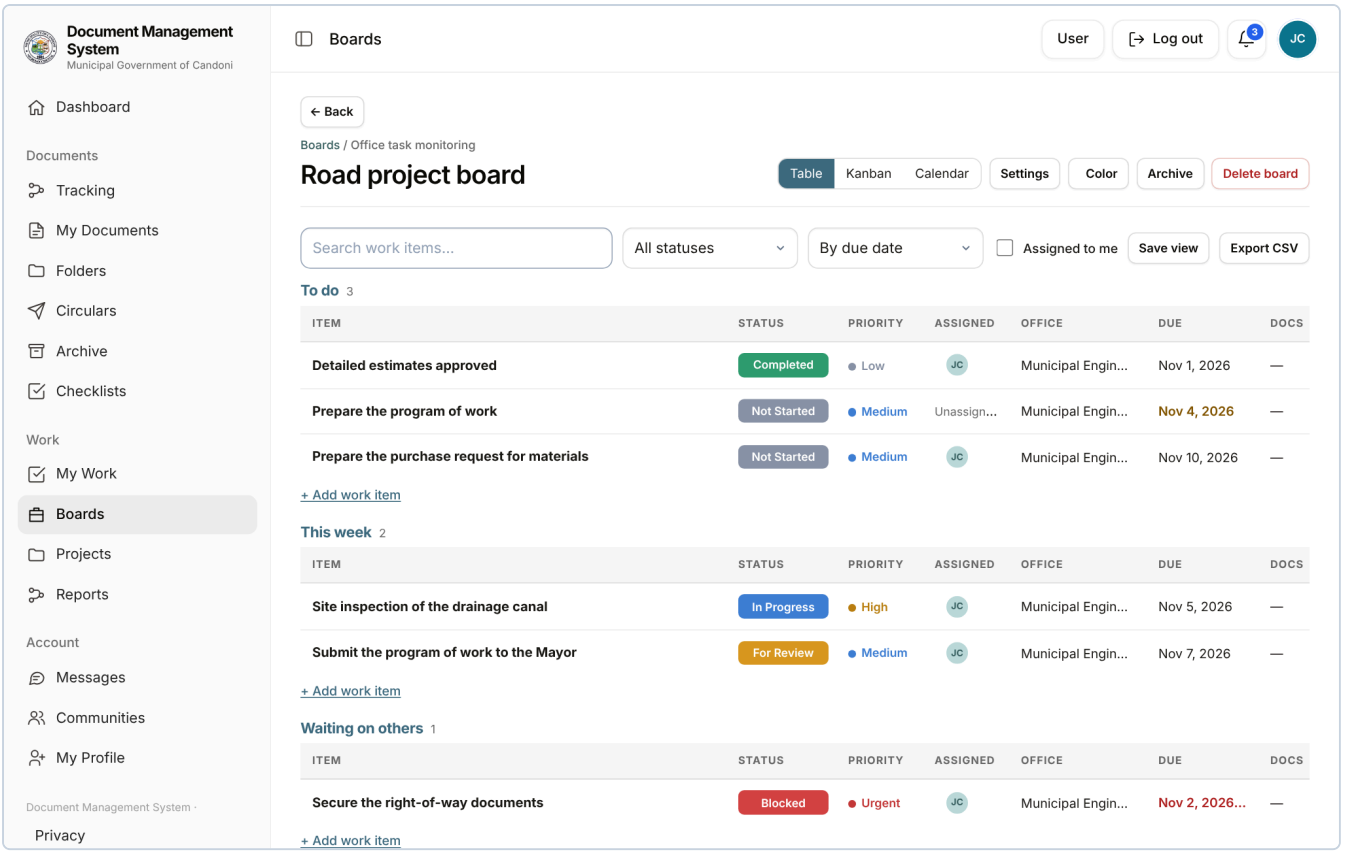

Boards

- **+ New board**: name it, choose a **template** (it gives the board its first groups), the office, and add people by name or email as **Manager** (board settings and people), **Member** (creates, edits and assigns work items) or **Viewer** (reads only).
- **Everyone in an office** sees the boards of their office and their work items, as viewers, even if not added to them.
- **Office heads** manage every board of their office, as its managers do: its settings, people, columns and work items.

Work items

Under a group, click **+ Add work item**. An item has a title, description, **status** (Not Started, In Progress, Blocked, For Review, Completed), **priority**, the people **assigned**, the **responsible office**, **start** and **due** dates, tags, and any columns the board adds. Click an item to open its details; **Save** keeps the changes, and its **Activity** lists who changed what and when.

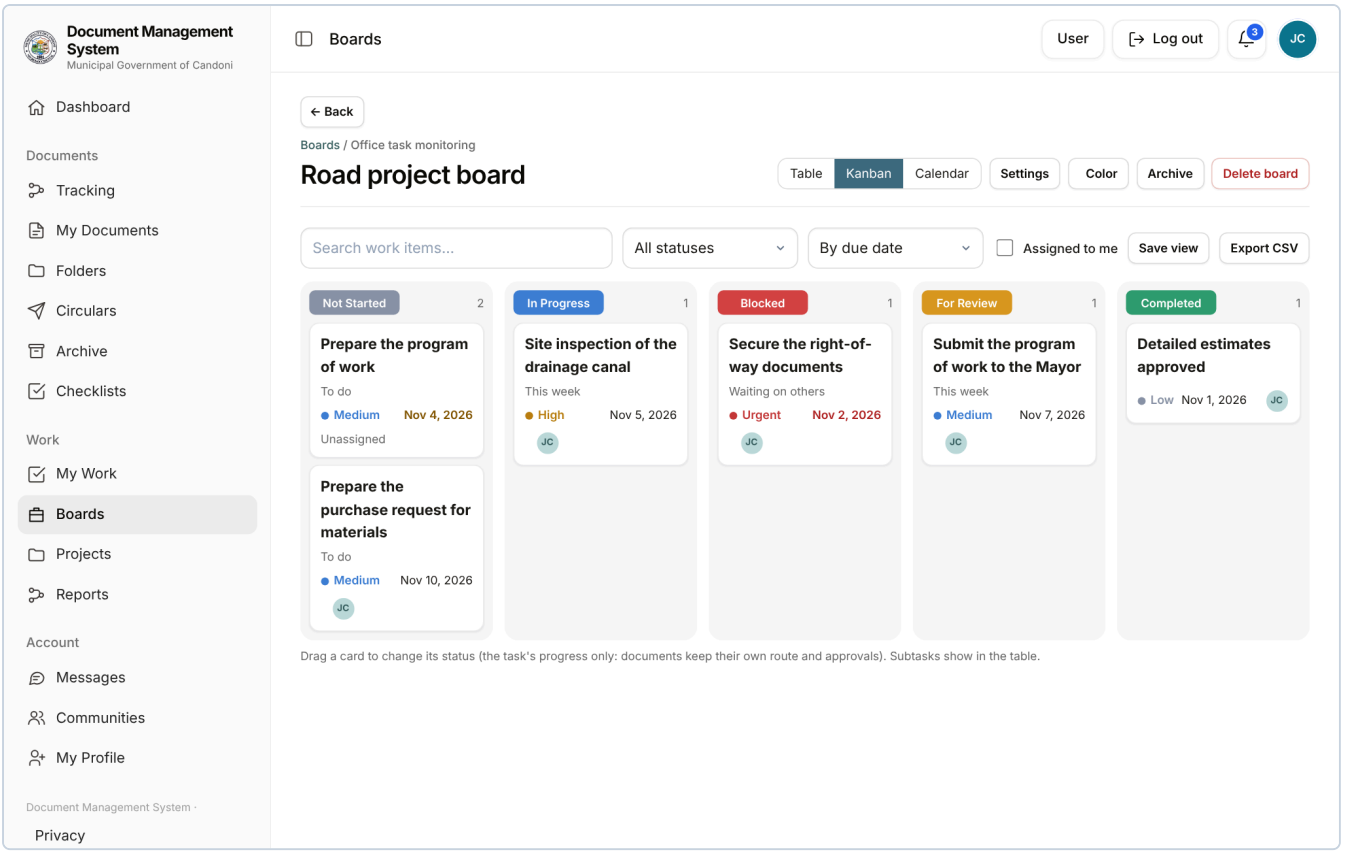

- **Linked documents**: **+ Link a DMS document** picks a document you may open. Each shows its number, status and where it is on its route. Someone who may not open that document sees only *Restricted document*: being on a board never opens a document.
- **Checklist**: type a line and **Add**; tick lines as they are done.
- **Subtasks**: **Add subtask** creates a work item under it.
- **Comments**: write one and click **Comment**. **Mention someone…** notifies a person on the board.
- From a document's page, the **Work items** card lists the items that link it, with **+ Create work item** and **+ Add to a work item**.

A board in the Table view

Table, Kanban and Calendar

The switch at the top of a board shows the items as a **Table** (grouped, with search, filters and sorting), a **Kanban** (a column per status: drag a card to change its status) or a **Calendar** (items on their due dates; red overdue, yellow blocked, green completed).

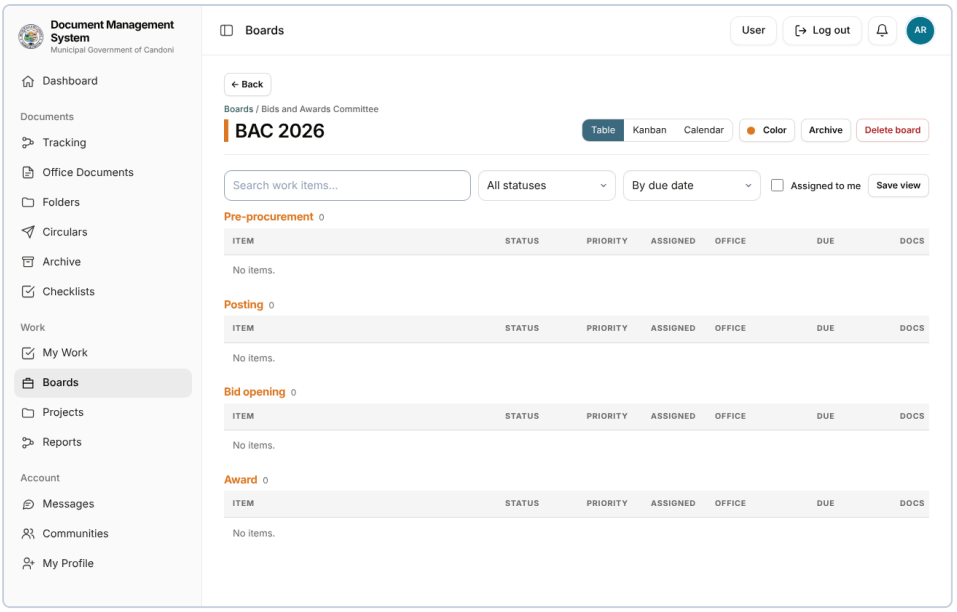

The Kanban view

Saved views, columns, export and reminders

- **Saved views**: set the search, filters, sort and view, then **Save view** and name it. A manager can share a view with everyone on the board.
- **Board columns**: in **Settings**, **+ Add a column**: text, number, amount (₱), date, dropdown, checkbox, person on the board, or office.
- **Export CSV** saves the listed items as a spreadsheet. A manager chooses in Settings who may export.
- **Deadline reminders**: the people assigned are reminded the day before an item is due, on the due date, and once when it is overdue (Notifications, and email when set up), every morning at 7:00. A manager can switch them off for a board in Settings.

Color, archive and delete

- **Color** (top of a board): gives the board a color on its card and on the board. Set by the head of the board's office, its managers and administrators.
- **Archive**: puts away finished work. An archived board becomes read-only and is left out of lists, Reports, the Dashboard and reminders. **Archived boards** lists them; open one and click **Restore**. Shown to the board's managers, the head of its office and administrators.
- **Delete board**: removes the board and all its work items (the linked DMS documents are not affected). Shown to the board's creator, the head of its office and administrators. It cannot be undone.

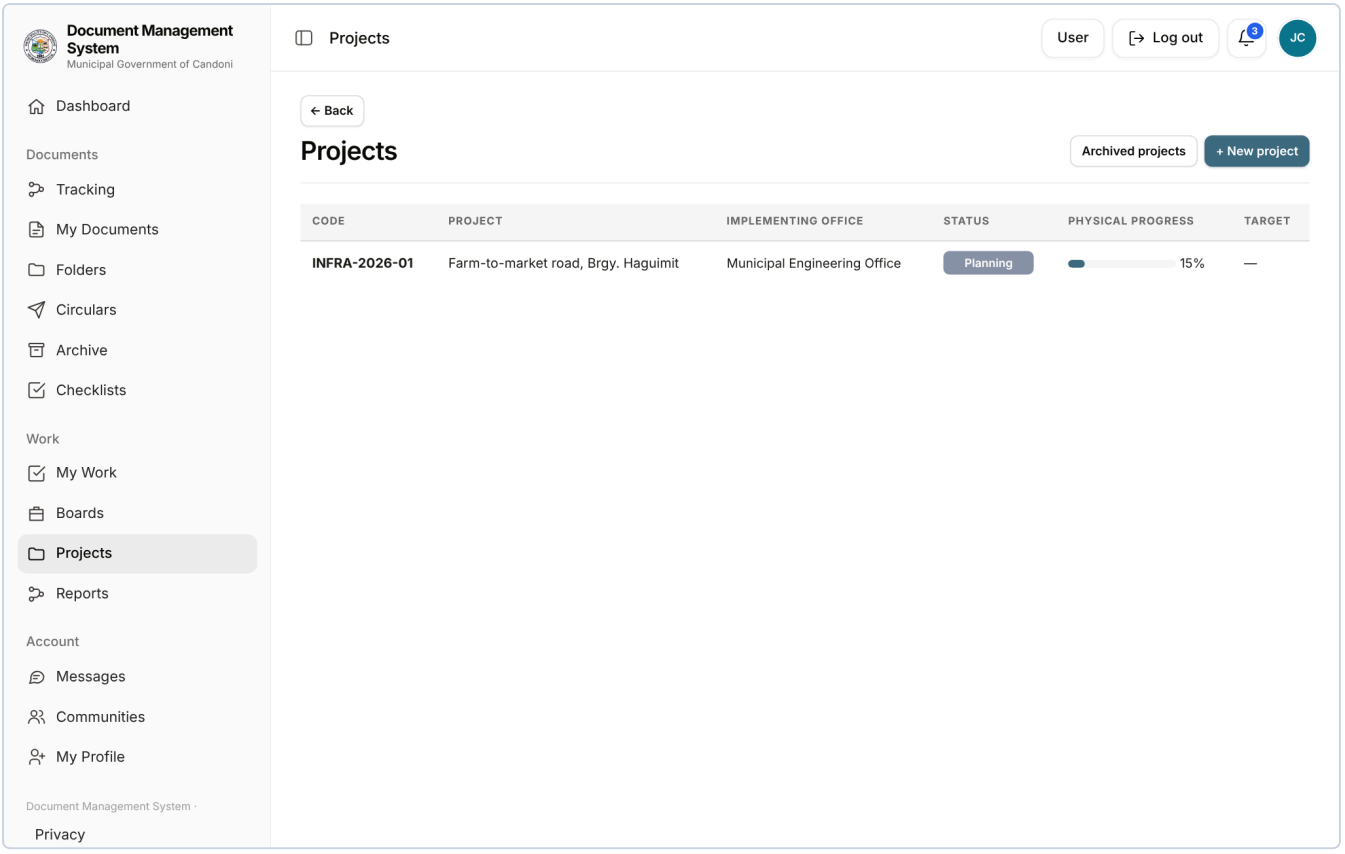

Choosing a board color

18. Projects and Reports NEW

Projects

Projects (menu, under Work) keep municipal projects. **+ New project**: its project code, name, implementing office, status (Planning, Ongoing, On Hold, Completed, Cancelled), start and target completion dates and, if it applies, the funding source and approved budget. Add people as Manager, Member or Viewer. Office heads see every project of their office.

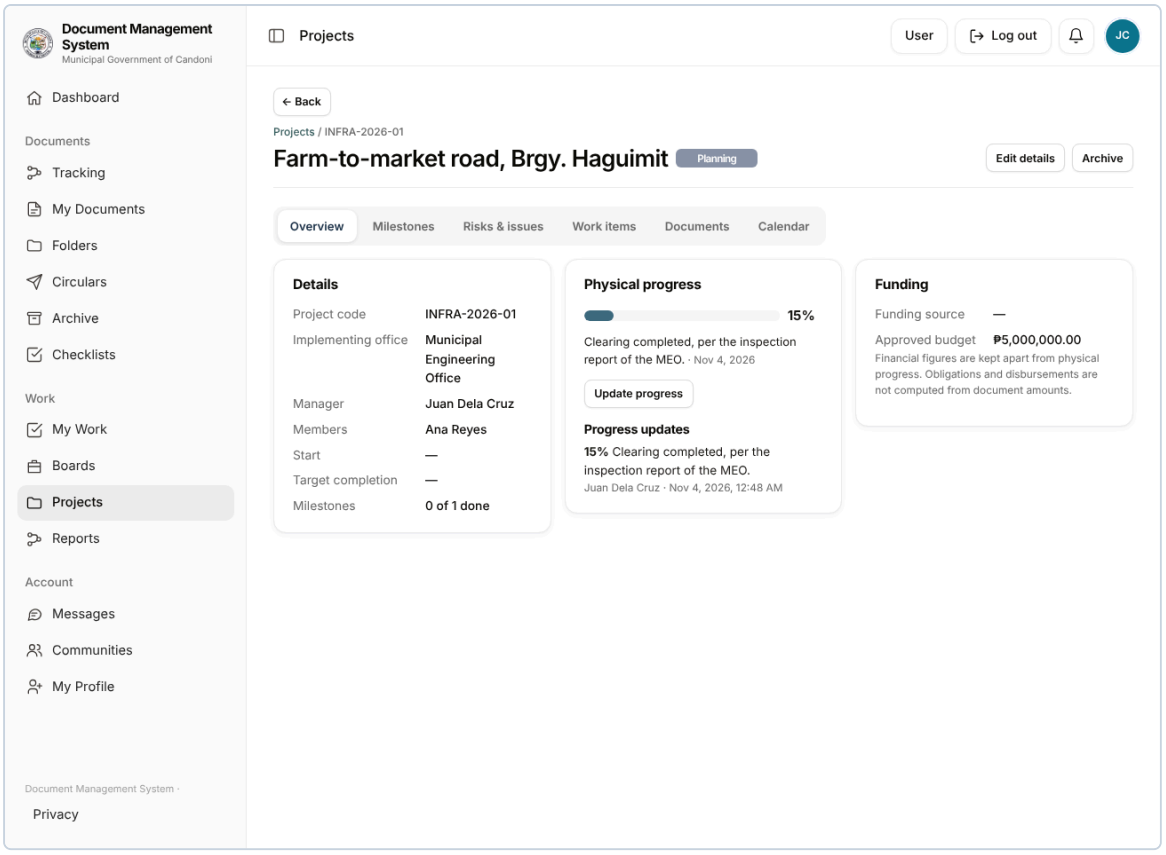

Projects

A project's tabs:

- **Overview**: its details, physical progress and funding. **Update progress** sets the progress (%) with a required explanation; every update is kept and cannot be changed.
- **Milestones**: add them with a due date; tick one when done. Overdue ones show in red.
- **Risks & issues**: record a risk, issue or blocker with its severity; **Mark resolved** or **Reopen**.
- **Work items**: relate a board; its work items for this project are listed here.
- **Documents**: **+ Link a DMS document**.
- **Calendar**: milestones and the due dates of the project's work items.

Projects can be archived and restored like boards.

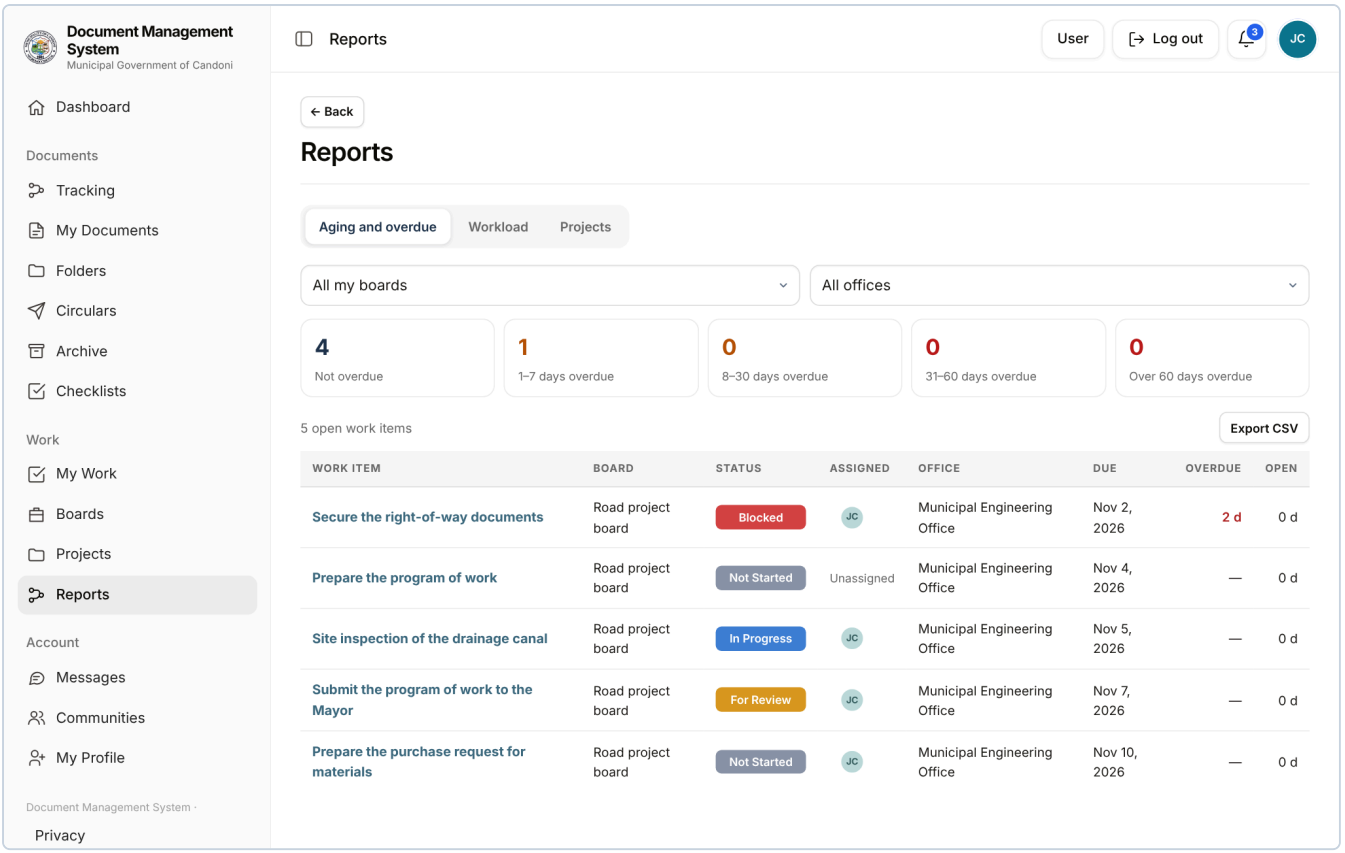

A project's Overview

Reports

Reports (menu, under Work) count only the boards, work items and projects you can already see.

- **Aging and overdue**: open work items by how overdue they are (Not overdue, 1–7, 8–30, 31–60, over 60 days). Click a box to list only those. Filter by board and responsible office.
- **Workload**: per responsible office (or **By person**): open, overdue, blocked, due in the next 7 days, and completed in the last 30 days.
- **Projects**: each project's status, progress, milestones done and overdue, open risks and issues, approved budget and days to the target date.

Export CSV on each report saves what is listed. An export never names a linked document; it gives only how many are linked.

Reports

19. Third Party users (suppliers, payees)

People outside the LGU who must sign a document, such as a supplier's conforme on a PO or a payee, use DMS as a Third Party.

Getting a Third Party account

1. The person creates an account on the sign-in page, like anyone else.
2. An administrator approves it in Users with the role Third Party (no office).

What a Third Party sees and does

- **Documents for you**: the documents sent to them, and under Sent back the ones they already signed and returned.
- **Messages**: to write to LGU personnel, who can also write to them.
- **My Profile**: their PNPKI certificate or signature mark.

To act on a document: open it, sign it (PNPKI or e-signature), then **Send back** (when referred) or route or return it (when it is their route step). They cannot prepare documents, join communities, or see checklists, tracking, circulars, boards or any other document.

Sending a document to a Third Party

- On a third-party route step: the preparer names the person in the Workflow card (section 9).
- Any time: the office holding the document uses **Refer to a person...** and picks them (marked Third Party).

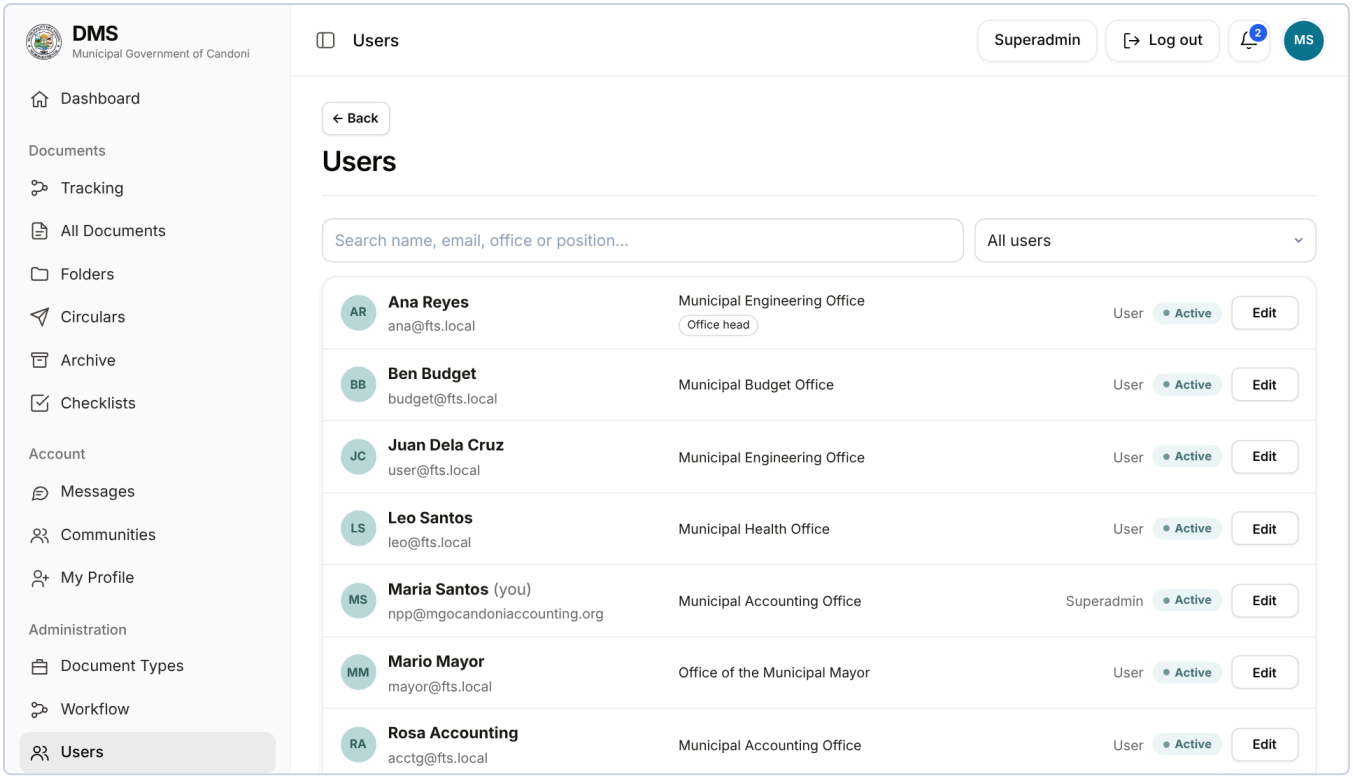

20. Administration

Administrators approve users and set up how DMS works: document types, routes, checklists, board templates and settings. Making administrators is for the superadmin only.

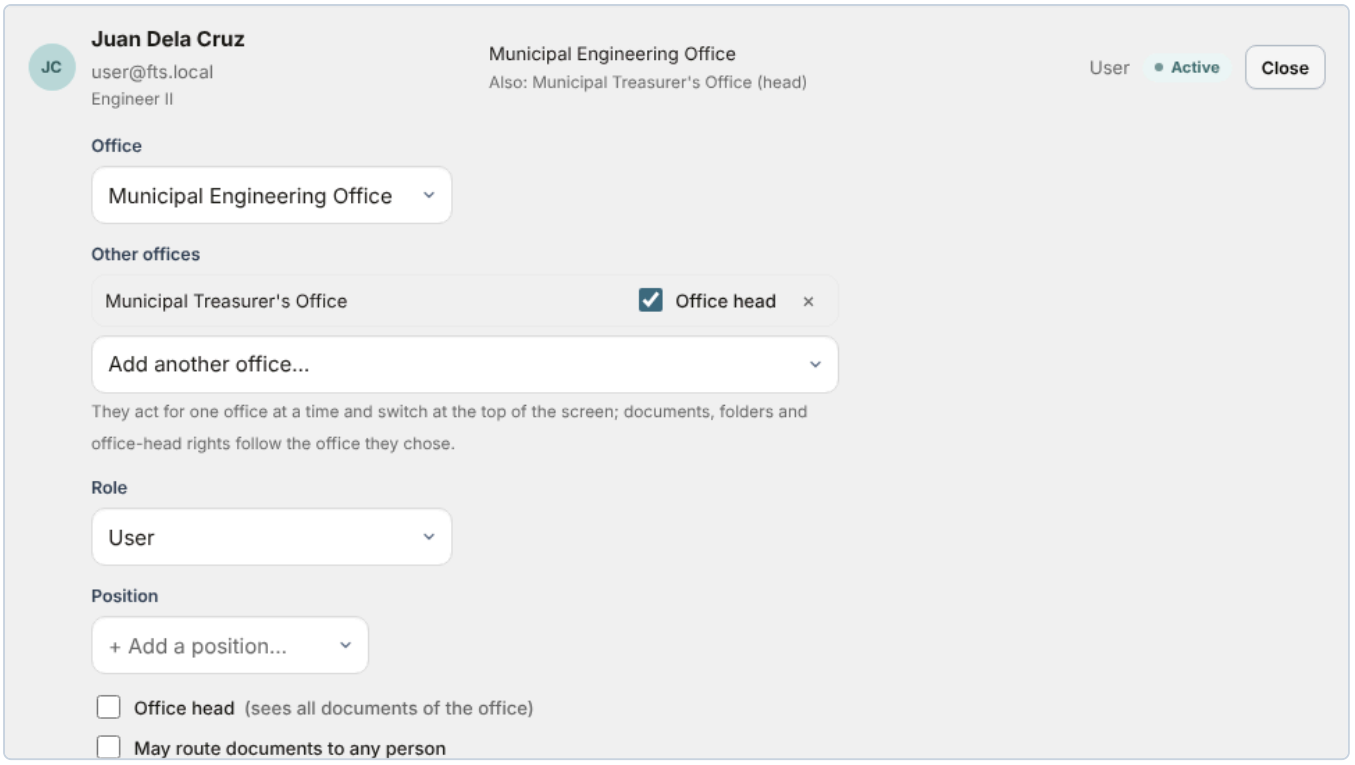

Users

Each person is one row: name, email, office (with Office head and positions as tags), role and status. Search by name, email, office or position; filter by All users, Pending approval or Active.

- **Approve** activates a new account. The office they asked for shows as Asked for.
- **Edit** opens the person's settings: **Office** and **Role** (User, Records Officer, Third Party, Admin or Superadmin; the last two only for the superadmin); **Position**; **Office head**; **May route documents to any person**; **Deactivate**.
- **Other offices** NEW: for a person who works for more than one office, keep their Office and choose **Add another office...**. Tick **Office head** for an office they head there, or × to remove one. They switch between these offices at the top of their screen (section 3).

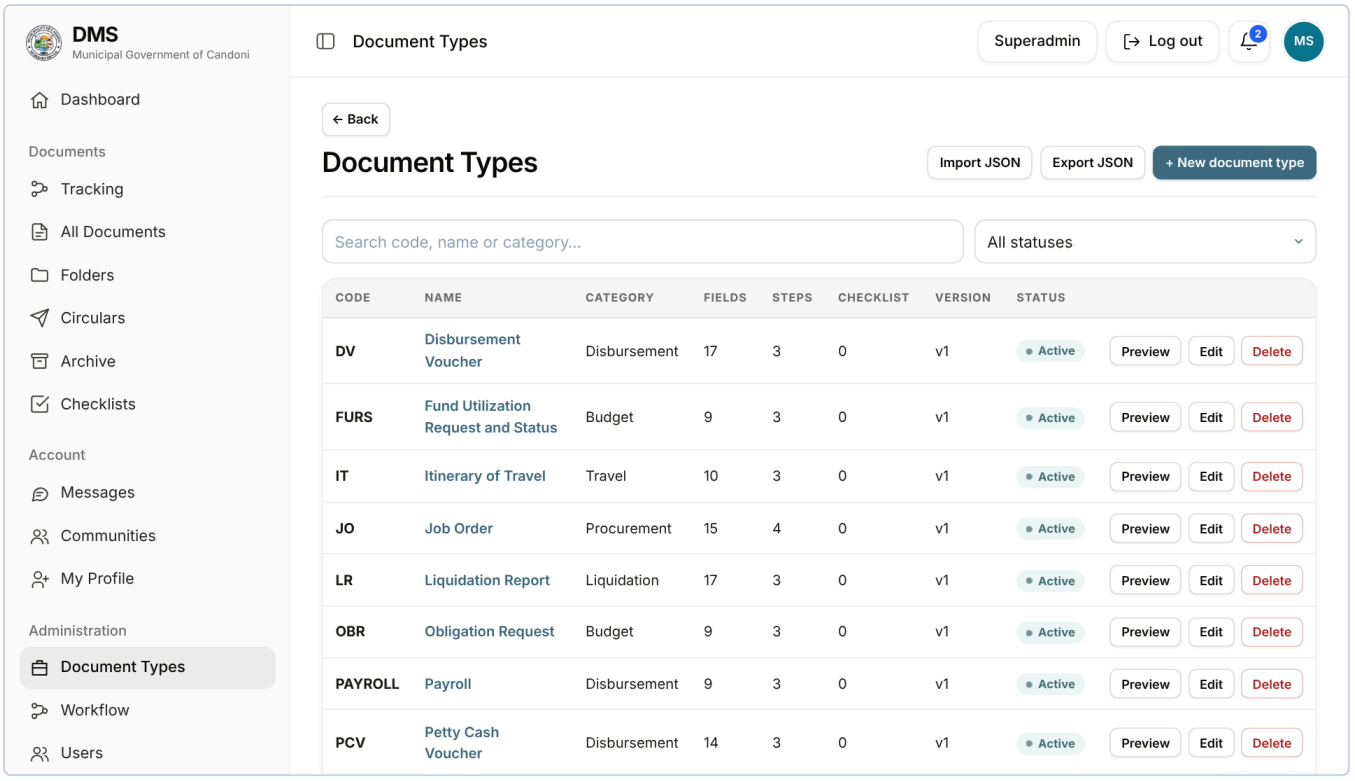

Users

Other offices for a person

Document Types

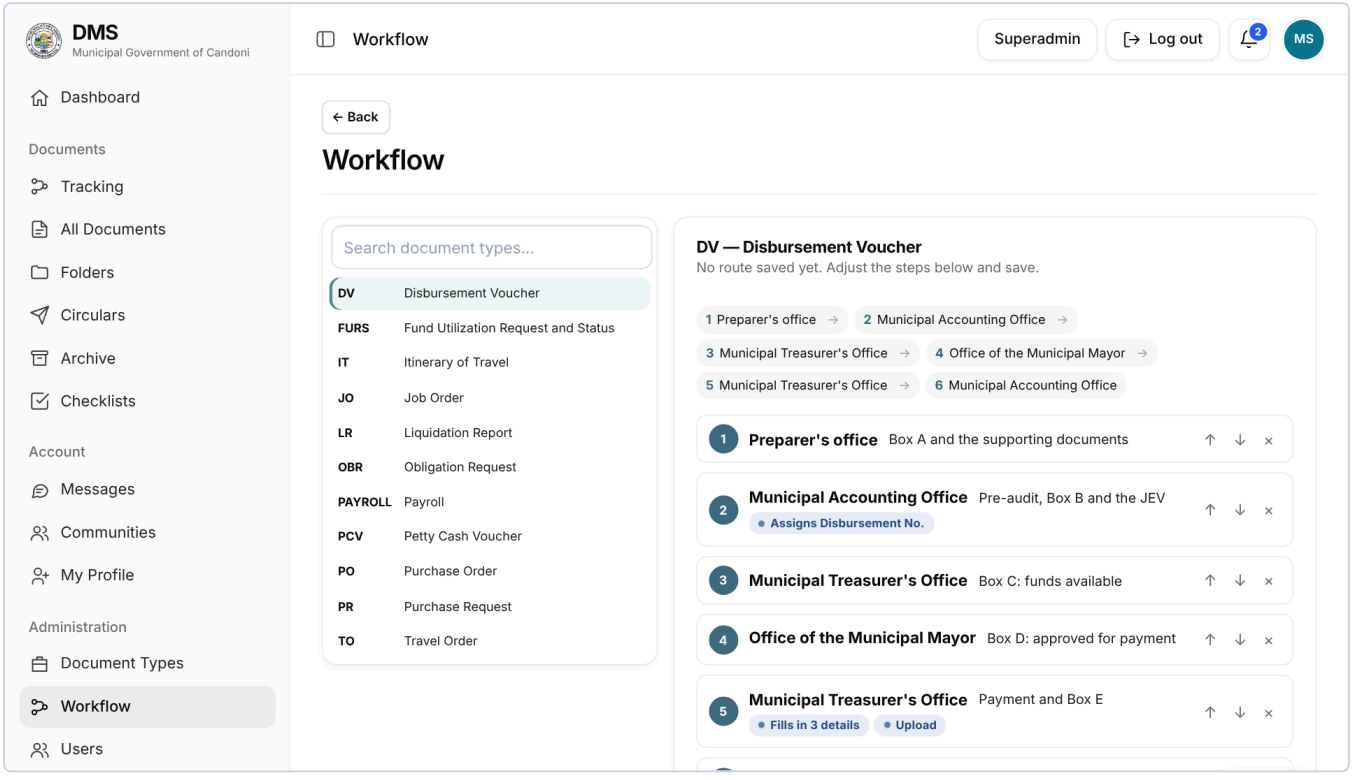

- **+ New document type**, **Edit**, **Preview** (the blank form, steps and guide), **Delete** (existing documents keep their own copy of the format). Click Active / Inactive to switch a type on or off.
- **Import JSON** / **Export JSON** move types between sites. **Load starter formats** adds any missing built-in form.
- Each type has tabs: General, Guided Steps, Fields, Checklist, Processing Guide and Format / Template. A type with no standard signatories gets the Signatories step (section 5).
- **Uploaded only: no format** makes a type that is only uploaded, with its own route.

Document Types

Workflow (routes)

Administration → Workflow sets each type's route. Pick a type, then for each step: choose the office (a named office, Preparer's office, or Third party); type the action; tick **Must sign the PDF before routing** where the office signs; optionally set **Who acts** (positions), **Alternate offices**, and **Assign a reference no.** with its pattern. Add, remove and reorder steps, then click **Save route**.

Workflow

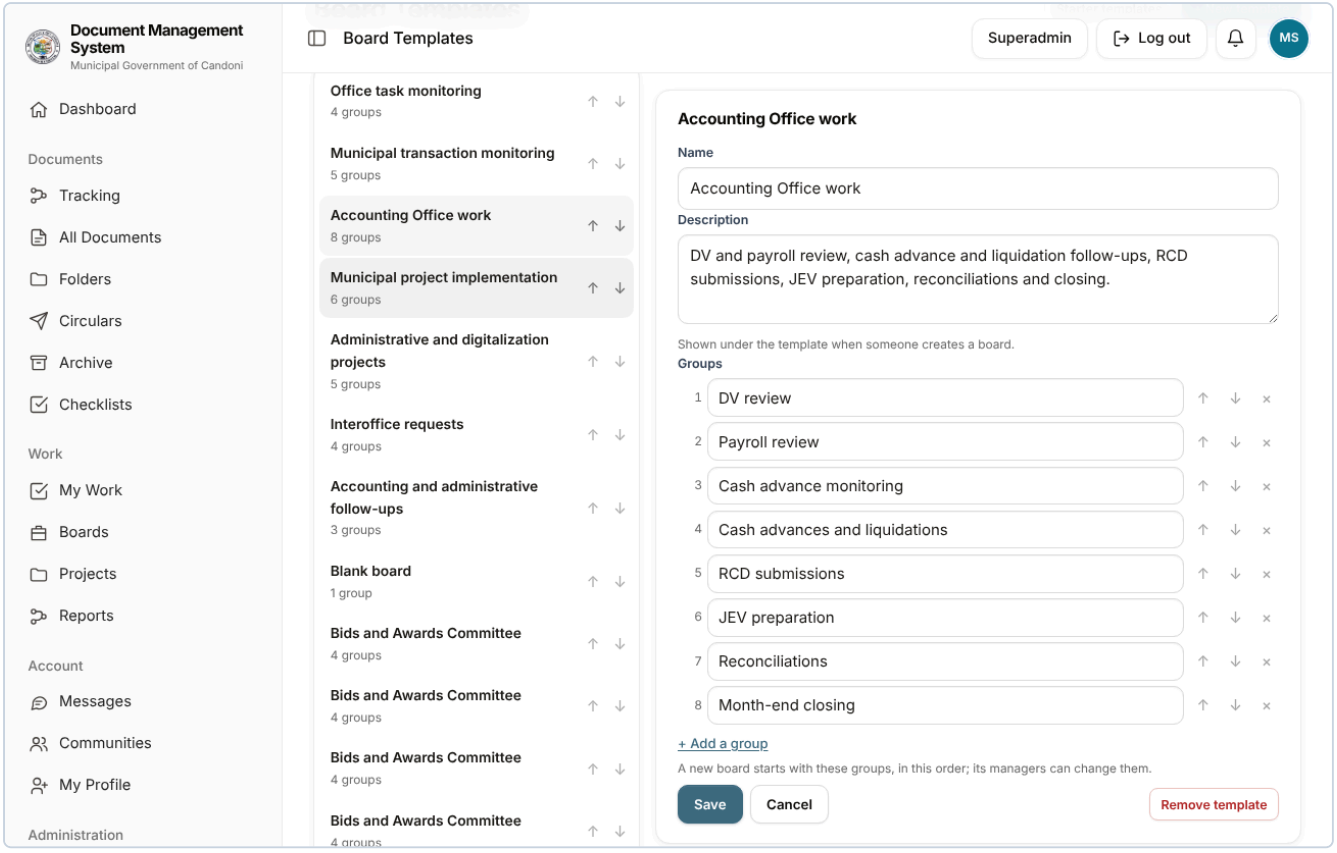

Number patterns use {YYYY} {YY} {MM} {DD} {FUND} and {####} for the series. New documents follow the saved route; documents already moving keep the route they started with. A type with no route follows its processing guide, and its documents can be sent for signature (section 8).

Checklists

On Checklists, administrators create, edit and delete checklists, and load any missing from the library. Each item has a document type, optional details, Always required (Y) or If applicable (Y / N/A), and an optional group heading.

Board Templates NEW

Board Templates are the templates offered when someone creates a board. The page lists them with how many groups each has (↑ ↓ change their order). Click one to edit its name, description and groups, then **Save** (or **Remove template**). **+ New template** adds one; **Starter templates** puts back the original list. A new board copies its template's groups, so changing or removing a template does not change existing boards.

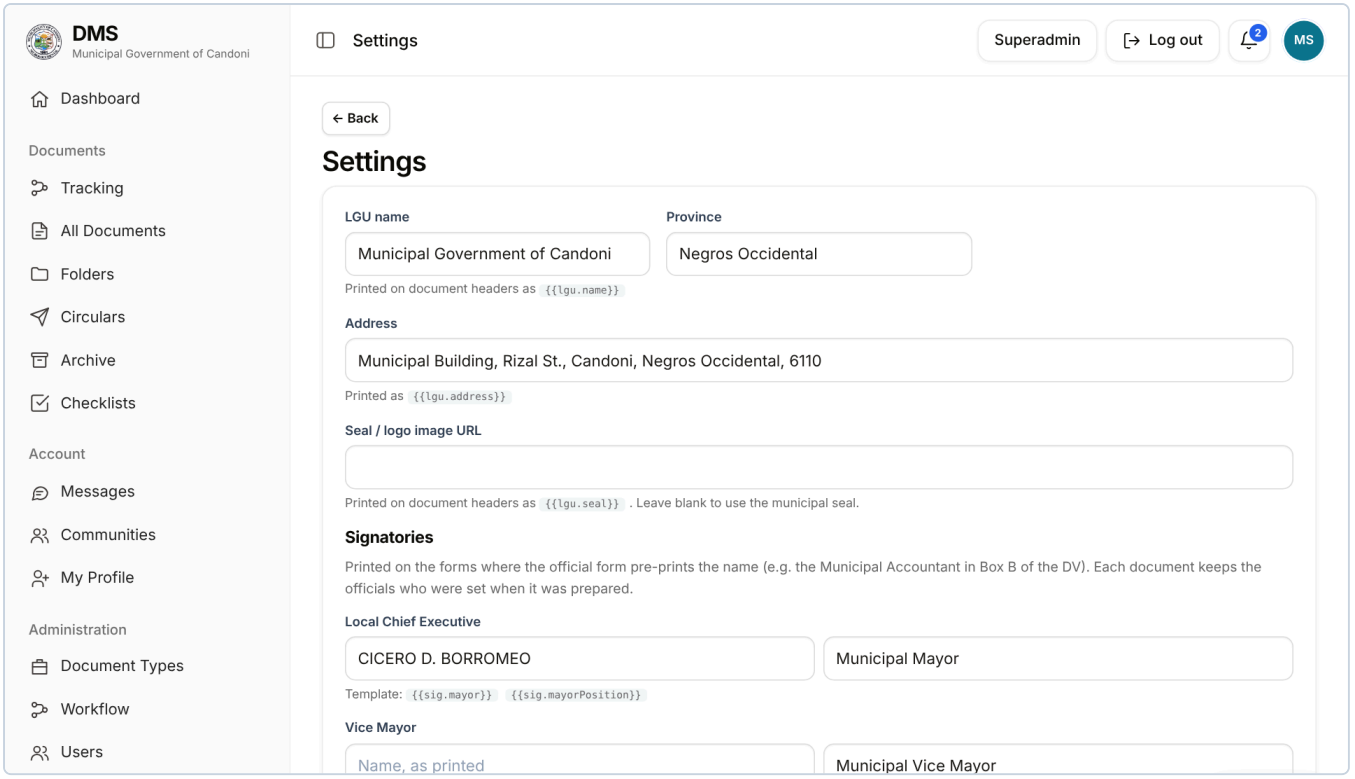

Board Templates

Settings

- The LGU name, address and seal.
- **Signatories**: Mayor, Vice Mayor, Accountant, Budget Officer, Treasurer, Secretary to the Sanggunian, printed where the forms pre-print a name.
- **Offices**, **Positions** and **Funds**.
- **Office letterheads**: for each office, its title, email and contact number.
- **Numbering**: the DMS control number's prefix, digits and when it restarts; and **Reference numbers (DRN)**, each with its format and when it restarts.

- **Data Protection Officer**: the contact shown in the Privacy notice.

Settings

Access for any office

Administrators (and the Records Officer) can give or restrict access in any office: Folders → Access, choose the office, then as in section 12. Administrators see every board and project, and may export from every board.

21. Troubleshooting and FAQ

Problem	What to do
Stuck on Waiting for approval	Ask an administrator to approve you in Users, then click Check again.
I can't see a colleague's document	Staff see their own documents, those that reached their office, and those forwarded or referred to them. Ask your office head for access (section 12).
I don't see my other office's documents	Switch to that office at the top of the screen. If it is not listed, ask an administrator to add it under Other offices.
Sign with PNPKI is greyed out	Signing opens only at a step that signs, while the document is with your office, or when it is your turn on a signature request. Without a certificate in My Profile, use E-signature.
E-signature is greyed out	You have a PNPKI certificate saved: sign with PNPKI.
Route is greyed out	Do what the step still needs: sign, put the reference number on the PDF, fill in its details, upload its file, or confirm the offices. A document on hold must first be taken off hold.
A document is On Hold	The office holding it gives the reason in the Workflow card. It moves again when that office clicks Take off hold.
Someone declined to sign	Read their reason in the Signatures card, fix the document, then Ask for signatures again.
A signed certificate stays For Processing	Everyone has signed: click Mark processed in the Signatures card to move it to the Archive.
Wrong reference number	Edit it before it is on the PDF; Change it takes it off until you route.
I need to change a routed document	Ask the office holding it to Return it to you, then Edit and Make a new PDF.
Wrong checklist chosen	Change checklist on the document page.
I can't run the pre-audit check	Only the Accounting Office runs it, on a DV converted to PDF. With more than one office, switch to Accounting first. Each person can run it 20 times a day.
Uploaded PDF has no QR code	Click Add QR code on the document.
Verify says something was added after the last signature	The file was changed after signing. Ask for a copy from DMS (scan its QR code).
I can't change a board	You are a viewer on it. Ask its manager or the head of its office to add you as a member. Archived boards are read-only until restored.
Google Drive backup shows Problem	Read the error on the account. If the person who connected it changed role, connect it again.
A device backup shows Due	Plug in the device and click Back up (section 15).

Good practices

- Route a document only when its paper actually leaves your office.

- Always write remarks when you return a document or put it on hold, so the other office knows what to fix.
- Keep Ask for my password every time unless the device is yours alone.
- Scan the QR code of any DMS document you receive on paper to check it is genuine and current.
- Keep work items' due dates and statuses current, so My Work, reminders and Reports stay accurate.
- Records Officer: back up to your devices when they show Due, and check the Google Drive card once a week.
